

agile team maturity assessment

Agile Team Maturity Assessment: Unlocking the True Potential of Your Agile Teams

agile team maturity assessment is an essential process for organizations striving to maximize the effectiveness of their agile teams. As agile methodologies continue to dominate software development and project management landscapes, understanding how mature a team is in its agile practices can make the difference between a project's success or struggle. But what exactly does an agile team maturity assessment entail, and why should teams invest time in it? Let's dive deep into this topic, exploring its nuances, benefits, and practical approaches.

What Is Agile Team Maturity Assessment?

At its core, agile team maturity assessment is a diagnostic evaluation of how well a team embraces and implements agile principles, values, and practices. It measures the progression of a team from basic awareness of agile concepts to advanced, self-sustaining agile execution. Like any maturity model, it recognizes that teams evolve over time, moving through stages of growth, learning, adaptation, and continuous improvement.

The assessment typically covers multiple dimensions, including collaboration, communication, delivery processes, response to change, and leadership engagement. By analyzing these facets, organizations can pinpoint strengths and weaknesses, enabling targeted coaching, training, and process refinement.

Why Assess Agile Team Maturity?

You might wonder why a team that already practices agile needs to be assessed. The truth is that agile is not a one-size-fits-all solution, and teams can vary widely in how well they internalize its principles. Conducting a maturity assessment helps:

- Identify gaps between current agile practices and industry best practices.
- Facilitate a shared understanding of team capabilities and challenges.
- Drive continuous improvement by setting achievable, measurable goals.
- Enhance stakeholder confidence by demonstrating a commitment to agile excellence.
- Align teams around common agile values, reducing friction and improving collaboration.

Without this insight, teams risk stagnation or falling into anti-patterns that mimic agility but fail to deliver value.

Key Dimensions of Agile Team Maturity

An effective agile team maturity assessment evaluates multiple dimensions, capturing the holistic nature of agile work. Here are some critical areas usually considered:

1. Team Collaboration and Communication

Agile thrives on open and effective communication. Mature teams exhibit transparent dialogues, constructive feedback, and active listening. They foster psychological safety, where members feel comfortable sharing ideas or raising concerns without fear of judgment.

2. Agile Practices and Processes

This dimension looks at how well teams adopt core agile ceremonies like daily stand-ups, sprint planning, retrospectives, and backlog grooming. It also assesses the use of frameworks such as Scrum, Kanban, or Lean and whether these are adapted to fit the team's context.

3. Delivery and Quality Management

High maturity teams deliver value frequently and maintain high-quality standards. This involves continuous integration, automated testing, and a strong focus on customer feedback to refine deliverables iteratively.

4. Adaptability and Response to Change

The hallmark of agile is embracing change. Mature teams quickly pivot when needed, re-prioritize backlogs effectively, and view failure as a learning opportunity rather than a setback.

5. Leadership Support and Team Autonomy

Leadership plays a crucial role in enabling agile maturity. Mature teams often enjoy servant leadership that empowers them rather than micro-manages. Autonomy fuels motivation and ownership, both vital for sustained agile success.

Popular Agile Maturity Models and Tools

There are several well-established models and tools designed to help organizations assess agile maturity comprehensively. Familiarizing yourself with these can provide a structured approach to your assessment efforts.

Agile Fluency Model

This model categorizes agile teams into zones based on their fluency in delivering value and improving continuously. It offers insights into what capabilities teams should develop at each stage and helps guide targeted coaching.

Spotify's Squad Health Check

Inspired by Spotify's agile culture, this tool focuses on team health indicators such as fun, autonomy, mission clarity, and quality. It's a lightweight, participative method that encourages honest self-reflection.

Scaled Agile Framework (SAFe) Assessment

For organizations operating at scale, SAFe provides maturity assessments aligned with its framework's principles. This helps teams and programs gauge readiness and identify areas needing support.

Custom Surveys and Workshops

Many organizations prefer crafting their own assessments tailored to their unique context. These often combine surveys, interviews, and interactive workshops to capture a rich understanding of team maturity.

How to Conduct an Agile Team Maturity Assessment

Conducting an effective assessment requires thoughtful preparation and follow-through. Here are some practical steps:

1. **Define Clear Objectives:** Establish what you want to achieve with the assessment. Are you seeking to improve delivery speed, enhance

collaboration, or prepare for scaling agile practices?

2. **Choose or Customize an Assessment Tool:** Select a maturity model or create one that resonates with your organization's culture and goals.
3. **Engage the Entire Team:** Include all team members in the process to get diverse perspectives and foster ownership of the outcomes.
4. **Collect Data:** Use surveys, interviews, and observations to gather qualitative and quantitative data about current practices.
5. **Analyze and Share Results:** Identify patterns, strengths, and areas for improvement. Present findings transparently to build trust and alignment.
6. **Create an Improvement Roadmap:** Develop actionable steps with milestones and measurable outcomes to guide the team's growth.
7. **Follow Up Regularly:** Agile maturity is dynamic. Schedule periodic reassessments to track progress and adjust strategies as needed.

Common Challenges in Agile Team Maturity Assessment

While assessments can be transformative, they're not without hurdles. Understanding these challenges can help you navigate them effectively.

Resistance to Evaluation

Some team members may perceive assessments as judgmental or threatening. Clear communication about the purpose—growth rather than criticism—is essential to mitigate defensiveness.

Overemphasis on Tools Over Culture

Focusing solely on processes or tools can miss the bigger picture. Agile maturity is deeply intertwined with team culture, mindset, and behaviors.

One-Size-Fits-All Approaches

Applying generic models without adaptation can lead to irrelevant insights.

Tailoring assessments to your organization's context ensures meaningful outcomes.

Neglecting Continuous Improvement

An assessment is just a starting point. Without commitment to follow-up actions, the exercise loses its value.

Tips for Enhancing Agile Team Maturity

Based on assessment insights, here are some practical ways teams can progress:

- **Invest in Agile Training and Coaching:** Provide ongoing learning opportunities tailored to team needs.
- **Encourage Open Communication:** Build forums for honest feedback and collaborative problem-solving.
- **Empower Teams:** Foster autonomy by trusting teams to make decisions and manage their work.
- **Promote a Culture of Experimentation:** Allow teams to try new approaches and learn from failures without fear.
- **Align Leadership with Agile Values:** Ensure leaders act as servant-leaders, removing impediments and supporting growth.
- **Leverage Metrics Wisely:** Use metrics to inform improvements, not to punish or micromanage.

As your teams evolve, the agile team maturity assessment becomes an invaluable compass, guiding you toward higher performance, better products, and a more engaged workforce. Embracing this ongoing journey of reflection and growth can transform not only how teams work but also how organizations innovate and compete in today's fast-paced world.

Frequently Asked Questions

What is an agile team maturity assessment?

An agile team maturity assessment is a process used to evaluate how well a

team adopts and practices agile principles, methodologies, and values. It helps identify strengths and areas for improvement to enhance team performance.

Why is assessing agile team maturity important?

Assessing agile team maturity is important because it provides insights into the team's current agile capabilities, highlights gaps in practices, and guides targeted improvements to increase productivity, collaboration, and delivery quality.

What are common dimensions evaluated in an agile team maturity assessment?

Common dimensions include team collaboration, agile practices adherence, continuous improvement, communication, leadership support, technical excellence, and customer focus.

How often should agile team maturity assessments be conducted?

Agile team maturity assessments are typically conducted quarterly or biannually to track progress over time, adapt to changes, and continuously improve agile practices.

What tools can be used for agile team maturity assessment?

Tools such as surveys, self-assessment checklists, maturity models (e.g., Agile Fluency Model, Scrum Maturity Model), and retrospectives can be used to conduct agile team maturity assessments.

How can the results of an agile team maturity assessment be used?

Results can be used to create action plans for skill development, process improvements, training needs, and to align team practices with organizational agile goals.

What are the typical maturity levels in an agile team maturity model?

Typical levels range from initial or ad-hoc practices, defined processes, managed practices, quantitatively managed, to optimizing or continuously improving agile practices.

Can agile maturity assessments be customized for different teams?

Yes, agile maturity assessments can and should be tailored to reflect the team's unique context, size, industry, and agile framework used to ensure relevance and effectiveness.

What challenges might teams face during agile maturity assessments?

Challenges include resistance to honest feedback, lack of clarity in assessment criteria, insufficient leadership support, and difficulty in translating results into actionable improvements.

How does agile team maturity impact project outcomes?

Higher agile team maturity typically leads to improved collaboration, faster delivery cycles, better quality products, increased customer satisfaction, and greater adaptability to change.

Additional Resources

Agile Team Maturity Assessment: Measuring Progress for Sustainable Agility

Agile team maturity assessment has become an essential practice for organizations striving to optimize their Agile transformations and ensure sustainable delivery of value. As Agile methodologies evolve from mere frameworks into organizational cultures, understanding the maturity level of Agile teams is critical to identifying strengths, uncovering gaps, and guiding continuous improvement. The process encompasses evaluating how well teams adopt Agile principles, collaborate, deliver iterative value, and respond to change. This article delves into the nuances of Agile team maturity assessment, exploring its frameworks, benefits, challenges, and best practices for leveraging maturity insights to drive meaningful growth.

Understanding Agile Team Maturity Assessment

At its core, Agile team maturity assessment is a systematic evaluation of a team's proficiency in applying Agile values and practices. Unlike a one-time audit, it offers a dynamic view of team capabilities across dimensions such as collaboration, technical excellence, process adherence, and stakeholder engagement. The purpose is not to assign a pass/fail grade but to map a continuum of maturity levels, helping organizations tailor coaching, training, and structural changes effectively.

Assessment models often encompass multiple maturity stages—ranging from initial or ad hoc Agile adoption to optimized, self-organizing teams delivering high business impact. This staged approach aligns with well-known maturity frameworks like the Agile Fluency Model, Scrum Maturity Model, and Scaled Agile Framework (SAFe) maturity assessments. Each provides a lens to examine facets such as:

- Team autonomy and decision-making
- Quality and technical practices (e.g., test automation, continuous integration)
- Agile ceremonies and rituals effectiveness
- Cross-functional collaboration and communication
- Metrics-driven performance improvements

By deploying these frameworks, organizations can benchmark their teams against industry best practices and contextualize their Agile journeys.

Why Conduct Agile Team Maturity Assessments?

Organizations invest in Agile maturity assessments for several strategic reasons:

- **Identifying Improvement Opportunities:** Pinpointing specific areas where teams struggle—be it backlog refinement, sprint planning, or retrospective effectiveness—enables targeted interventions.
- **Tracking Progress Over Time:** Regular assessments capture the evolution of Agile adoption, validating whether coaching efforts and process changes yield expected results.
- **Aligning Stakeholders:** Providing transparent, data-driven insights fosters shared understanding among leadership, product owners, and teams regarding Agile adoption status.
- **Scaling Agile Effectively:** For enterprises adopting frameworks like SAFe or LeSS, maturity assessments help evaluate readiness and identify bottlenecks in scaling Agile beyond individual teams.
- **Enhancing Delivery Predictability:** Mature Agile teams tend to demonstrate consistent velocity and improved quality, enabling better forecasting and stakeholder confidence.

Key Components of an Agile Team Maturity Assessment

A comprehensive assessment typically involves a blend of qualitative and

quantitative data collection methods:

1. **Surveys and Self-Assessments:** Team members provide feedback on their understanding and execution of Agile practices.
2. **Observations and Interviews:** Agile coaches or external assessors observe ceremonies, conduct interviews, and assess team dynamics firsthand.
3. **Metrics Analysis:** Data such as sprint velocity, defect rates, cycle times, and release frequency offer objective indicators of maturity.
4. **Artifact Review:** Examination of product backlogs, definition of done, and documentation to verify adherence to Agile standards.

Integrating these inputs offers a holistic picture that goes beyond surface-level compliance and captures the team's true agility.

Popular Agile Maturity Models and Their Approaches

Several models dominate the Agile maturity landscape, each emphasizing different aspects of maturity and catering to varying organizational needs.

The Agile Fluency Model

Developed by James Shore and Diana Larsen, the Agile Fluency Model outlines four fluency zones that teams progress through as they deepen their Agile capabilities:

- **Focusing:** Teams deliver business value regularly but rely heavily on external guidance.
- **Delivering:** Teams produce reliable, high-quality increments while improving technical practices.
- **Optimizing:** Teams optimize their processes and collaborate closely with stakeholders for continuous improvement.
- **Strengthening:** Teams innovate and adapt Agile principles to evolve organizational culture.

This model is praised for its focus on the benefits teams realize at each stage and the investments required to advance fluency.

Scrum Maturity Model

The Scrum Maturity Model evaluates how well teams implement Scrum roles, events, and artifacts, progressing from initial adoption to advanced mastery. It assesses:

- Role clarity and accountability
- Effective sprint planning and review
- Retrospective impact and action
- Technical practices supporting Scrum delivery

It is particularly useful for organizations with established Scrum teams seeking to deepen their capability.

Scaled Agile Framework (SAFe) Maturity Assessment

Designed for enterprises scaling Agile across multiple teams and programs, the SAFe maturity assessment measures lean-agile leadership, team and technical agility, program execution, and continuous learning culture. It provides a structured approach for evaluating Agile maturity at the portfolio and enterprise level, complementing team-level assessments.

Challenges in Assessing Agile Team Maturity

Despite its benefits, conducting an effective Agile team maturity assessment is not without challenges:

Subjectivity and Bias

Self-assessments and interviews can be influenced by personal biases or desire to present the team favorably. This risk necessitates triangulating data from multiple sources for accuracy.

Overemphasis on Process Compliance

Focusing too heavily on adherence to rituals or documentation can miss the bigger picture of Agile mindset and value delivery. Maturity assessments must balance process and people factors.

One-Size-Fits-All Pitfalls

Each team operates within unique contexts; rigid application of maturity models may not capture nuances or account for industry-specific factors.

Resource Intensity

Thorough assessments require time and skilled facilitators, which may strain smaller organizations or fast-paced environments.

Best Practices for Conducting Agile Team Maturity Assessments

To maximize the effectiveness of Agile team maturity assessments, organizations should consider the following strategies:

- **Customize Frameworks:** Adapt maturity models to reflect organizational culture, goals, and team structures instead of rigidly applying standard scales.
- **Engage Teams Collaboratively:** Involve team members in the assessment process to foster ownership and a growth mindset.
- **Combine Quantitative and Qualitative Data:** Use metrics alongside interviews and observations to build a balanced understanding.
- **Focus on Continuous Improvement:** View assessments as checkpoints rather than audits, emphasizing learning and adaptation.
- **Leverage Experienced Facilitators:** Employ Agile coaches familiar with maturity models to guide assessments and interpret results effectively.

Integrating Maturity Assessment into Agile Transformations

For organizations undergoing Agile transformations, maturity assessments can serve as critical feedback loops. By regularly measuring team maturity, leadership can calibrate transformation roadmaps, allocate coaching resources strategically, and celebrate incremental successes. This iterative approach aligns well with Agile principles themselves, fostering an environment where continuous improvement is embedded into the organizational fabric.

Moreover, maturity assessment results can help identify systemic impediments such as organizational silos, leadership gaps, or tooling deficiencies that inhibit Agile adoption. Addressing these broader challenges amplifies the impact of team-level improvements and accelerates enterprise agility.

Agile team maturity assessment, when implemented thoughtfully, transcends a mere diagnostic tool. It becomes a catalyst for cultural evolution, empowering teams to reach higher levels of performance and delivering sustained value in an increasingly complex business landscape.

agile team maturity assessment: The Virtual Team Maturity Model Ralf Friedrich, 2017-10-25 Ralf Friedrich developed an academically validated and process-oriented maturity model with emphasis on special needs of virtual teams. He provides criteria and indicators of performance for virtual teams and combines different approaches of maturity models into an overall framework to measure and develop virtual team performance. This book describes the development and validation of the Virtual Team Maturity Model (VTMM®) consisting of 11 processes for virtual team collaboration, defined by inputs, methods, outputs and Key Performance Indicators (KPIs) assigned to four maturity levels. The model supports an algorithm for calculating the maturity level of the team based on a set of questionnaires.

agile team maturity assessment: *Agile Metrics* Padmapriya D, 2024-10-30 Agile Metrics book is a practical guide crafted by a seasoned Agile practitioner, offering valuable insights to harness the power of metrics for optimal organizational performance. Go beyond monitoring team performance and discover how metrics can drive business agility with help of this book. Few questions this book address are: 1. How to define metrics for a system 2. How to make metrics iterative 3. How to estimate project scope in agile 4. What are the metrics for teams of various maturity 5. OKR and KPI's - where and how to apply

agile team maturity assessment: Strategic Approaches to Digital Platform Security Assurance Bobbert, Yuri, Chtepen, Maria, Kumar, Tapan, Vanderbeken, Yves, Verslegers, Dennis, 2021-05-21 Nowadays it is impossible to imagine a business without technology as most industries

are becoming smarter and more tech-driven, ranging from small individual tech initiatives to complete business models with intertwined supply chains and platform-based business models. New ways of working, such as agile and DevOps, have been introduced, leading to new risks. These risks come in the form of new challenges for teams working together in a distributed manner, privacy concerns, human autonomy, and cybersecurity concerns. Technology is now integrated into the business discipline and is here to stay leading to the need for a thorough understanding of how to address these risks and all the potential problems that could arise. With the advent of organized crime, such as hacks and denial-of-service attacks, all kinds of malicious actors are infiltrating the digital society in new and unique ways. Systems with poor design, implementation, and configurations are easily taken advantage of. When it comes to integrating business and technology, there needs to be approaches for assuring security against risks that can threaten both businesses and their digital platforms. Strategic Approaches to Digital Platform Security Assurance offers comprehensive design science research approaches to extensively examine risks in digital platforms and offer pragmatic solutions to these concerns and challenges. This book addresses significant problems when transforming an organization embracing API-based platform models, the use of DevOps teams, and issues in technological architectures. Each section will examine the status quo for business technologies, the current challenges, and core success factors and approaches that have been used. This book is ideal for security analysts, software engineers, computer engineers, executives, managers, IT consultants, business professionals, researchers, academicians, and students who want to gain insight and deeper knowledge of security in digital platforms and gain insight into the most important success factors and approaches utilized by businesses.

agile team maturity assessment: Software Process Improvement and Capability Determination Ioannis Stamelos, Rory V. O'Connor, Terry Rout, Alec Dorling, 2018-09-28 This volume constitutes the refereed proceedings of the 18th International Conference on Software Process Improvement and Capability Determination, SPICE 2018, held in Tessaloniki, Greece, in October 2018. The 26 full papers presented were carefully reviewed and selected from 40 submissions. The papers are organized in the following topical sections: SPI systematic literature reviews; SPI and assessment; SPI methods and reference models; SPI education and management issues; SPI knowledge and change processes; SPI compliance and configuration; SPI and agile; industry short papers.

agile team maturity assessment: FAST: Fully Aligned Strategic Teams Erich Orozco, 2025-02-08 Unlock True Organizational Agility Traditional scaling frameworks promised to bring agility to the enterprise but delivered rigidity instead. As organizations face the realities of remote work and rapid change, these frameworks are showing their age. It's time for a new approach. FAST (Flow, Agility, Simplicity, Teamwork) introduces a revolutionary framework designed for today's challenges. Built from the team level up—not imposed from the top down—this revolutionary framework reveals how to: Bridge the longstanding divide between strategy and execution Create environments where remote and hybrid teams thrive Build dense networks that accelerate innovation and adaptability Achieve strategic alignment without sacrificing team autonomy Transform rigid hierarchies into dynamic, high-performing teams Discover Inside: Why traditional scaling frameworks fall short in modern organizations How to leverage network density for better collaboration and innovation Practical techniques for fostering psychological safety in remote environments Evidence-based approaches to measuring and improving flow Clear guidance for implementing the FAST framework in your organization Perfect for: Leaders driving organizational transformation Agile coaches and practitioners seeking better ways to scale Teams struggling with remote and hybrid collaboration Organizations ready to move beyond outdated scaling practices FAST isn't another layer of process—it's a fundamental reimagining of how organizations can thrive in a rapidly evolving world. Break free from frameworks that divide and control. Create environments where people do their best work together. The future of organizational agility begins here.

agile team maturity assessment: Software Process Improvement and Capability

Determination Paul M. Clarke, Rory V. O'Connor, Terry Rout, Alec Dorling, 2016-05-11 This book constitutes the refereed proceedings of the 16th International Conference on Software Process Improvement and Capability Determination, SPICE 2016, held in Dublin, Ireland, in June 2016. The 28 full papers presented together with 5 short papers were carefully reviewed and selected from 52 submissions. The papers are organized in the following topical sections: SPI in regulated and safety critical domains; gamification and education issues in SPI; SPI in agile and small settings; SPI and assessment; SPI and project management concerns; empirical research case studies of SPI; knowledge and human communications issues in SPI.

agile team maturity assessment: The Agile Self-assessment Game Ben Linders, 2019-01-16 The Agile Self-Assessment Game is used by teams and organizations to self-assess their agility. Playing the game enables teams to reflect on their own team interworking, discover how agile they are and decide what they can do to increase their agility to deliver more value to their customers and stakeholders. This is the first book specifically about Agile Self-assessments. In this book, Ben Linders explains what self-assessments are and why you would do them, and explores how to do them using the Agile Self-assessment Game. He's also sharing experience stories from people who played the game. This book is based on his experience as a developer, tester, team leader, project manager, quality manager, process manager, consultant, coach, trainer, and adviser in Agile, Lean, Quality and Continuous Improvement. It takes a deep dive into self-assessments, viewing them from different perspectives and provides ideas, suggestions, practices, and experiences that will help you to do effective agile self-assessments with your teams. The book is aimed at Scrum masters, agile coaches, consultants leading agile transformations, developers and testers, project managers, line managers, and CxOs; basically for anyone who is looking for an effective way to help their agile teams improve and to increase the agility of their organization. With plenty of ideas, suggestions, and practical cases on Agile Self-assessments, this book will help you to apply assessments and help teams to improve. Note: The agile coaching cards needed to play the games described in the book can be downloaded for a nominal fee at benlinders.com/downloads.

agile team maturity assessment: *Software Process Improvement and Capability Determination* Antonia Mas, Antoni Mesquida, Terry Rout, Rory V. O'Connor, Alec Dorling, 2012-06-02 This book constitutes the refereed proceedings of the 12th International Conference on Software Process Improvement and Capability Determination, SPICE 2012, held in Palma de Mallorca, Spain, in May 2012. The 21 revised full papers presented and 14 short papers were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on organizational process improvement; SPI in small and very small enterprises; process models; SPI in automotive software and security; SPI in medical and safety critical systems; short papers.

agile team maturity assessment: Product-Focused Software Process Improvement Xavier Franch, Tomi Männistö, Silverio Martínez-Fernández, 2019-11-18 This book constitutes the refereed proceedings of the 20th International Conference on Product-Focused Software Process Improvement, PROFES 2019, held in Barcelona, Spain, in November 2019. The 24 revised full papers 4 industry papers, and 11 short papers presented were carefully reviewed and selected from 104 submissions. The papers cover a broad range of topics related to professional software development and process improvement driven by product and service quality needs. They are organized in topical sections on testing, software development, technical debt, estimations, continuous delivery, agile, project management, microservices, and continuous experimentation. This book also includes papers from the co-located events: 10 project papers, 8 workshop papers, and 4 tutorial summaries.

agile team maturity assessment: **Subject-Oriented Business Process Management. Models for Designing Digital Transformations** Matthes Elstermann, Anke Dittmar, Matthias Lederer, 2023-07-31 This book constitutes the refereed proceedings of the 14th International Conference on Subject-Oriented Business Process Management, S-BPM ONE 2023, held in Rostock, Germany, during May 31-June 1, 2023. The 10 full papers and 9 short papers included in this book

were carefully reviewed and selected from 24 submissions. They were organized in topical sections as follows: management issues and people; development and requirements; modeling, technology and infrastructure.

agile team maturity assessment: Software Process Improvement and Capability Determination Tanja Woronowicz, Terry Rout, Rory V. O'Connor, Alec Dorling, 2013-05-21 This book constitutes the refereed proceedings of the 13th International Conference on Software Process Improvement and Capability Determination, SPICE 2013, held in Bremen, Germany, in June 2013. The 21 revised full papers presented and 7 short papers were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on process quality; medical device software processes; design and use of process models; studies of software development; agile development; IT service management; assessment for diagnosis.

agile team maturity assessment: Systems, Software and Services Process Improvement Murat Yilmaz, Paul Clarke, Andreas Riel, Richard Messnarz, 2023-08-29 This two-volume set constitutes the refereed proceedings of the 30th European Conference on Systems, Software and Services Process Improvement, EuroSPI 2023, held in Grenoble, France, in August-September 2023. The 47 full papers presented were carefully reviewed and selected from 100 submissions. The papers are organized according to the following topical sections: SPI and emerging and multidisciplinary approaches to software engineering; digitalisation of industry, infrastructure and e-mobility; SPI and good/bad SPI practices in improvement; SPI and functional safety and cybersecurity; SPI and agile; SPI and standards and safety and security norms; sustainability and life cycle challenges; SPI and recent innovations; virtual reality and augmented reality.

agile team maturity assessment: The Practice of Enterprise Modeling Jaap Gordijn, Wided Guédria, Henderik A. Proper, 2019-11-19 This volume constitutes the proceedings of the 12th IFIP WG 8.1 Conference on the Practice of Enterprise Modeling held in November 2019 in Luxembourg, Luxembourg. The conference was created by the International Federation for Information Processing (IFIP) Working Group 8.1 to offer a forum for knowledge transfer and experience sharing between the academic and practitioner communities. The 15 full papers accepted were carefully reviewed and selected from 35 submissions. They are grouped by the following topics: modeling and ontologies; reference architectures and patterns; methods for architectures and models; and enterprise architecture for security, privacy and compliance.

agile team maturity assessment: Product-Focused Software Process Improvement Michael Felderer, Daniel Méndez Fernández, Burak Turhan, Marcos Kalinowski, Federica Sarro, Dietmar Winkler, 2017-11-10 This book constitutes the refereed proceedings of the 18th International Conference on Product-Focused Software Process Improvement, PROFES 2017, held in Innsbruck, Austria, in November/December 2017. The 17 revised full papers presented together with 10 short papers, 21 workshop papers, 3 posters and tool demonstrations papers, and 4 tutorials were carefully reviewed and selected from 72 submissions. The papers are organized in topical sections on : Agile software Development; Data science and analytics; Software engineering processes and frameworks; Industry relevant qualitative research; User and value centric approaches; Software startups; Serum; Software testing.

agile team maturity assessment: Systems, Software and Services Process Improvement Xabier Larrucea, Izaskun Santamaria, Rory V. O'Connor, Richard Messnarz, 2018-08-22 This volume constitutes the refereed proceedings of the 25th European Conference on Systems, Software and Services Process Improvement, EuroSPI conference, held in Bilbao, Spain, in September 2018. The 56 revised full papers presented were carefully reviewed and selected from 95 submissions. They are organized in topical sections on SPI context and agility, SPI and safety testing, SPI and management issues, SPI and assessment, SPI and safety critical, gamifySPI, SPI in industry 4.0, best practices in implementing traceability, good and bad practices in improvement, safety and security, experiences with agile and lean, standards and assessment models, team skills and diversity strategies, SPI in medical device industry, empowering the future infrastructure.

agile team maturity assessment: Business Agility Journey Antonio Muniz, Carla Krieger,

Julietta S. Dienstmann, Rodolfo Colares, Tatiana Feitosa, 2021-07-27 > Written collaboratively by 48 people with high performance in the market, sharing experiences and real cases > Content reviewed by 16 executives experienced in diversified business transformation The Jornada Colaborativa is a community passionate about people and technology that writes books uniting diverse experiences of the co-authors and curatorship of the selected organizers to maintain the high standard of quality. Book royalties are reserved with the publisher to help purchase the copies we use at Summit Day and the proceeds are donated to underprivileged institutions (we donated R\$ 137,000 to 12 institutions in 2019 and 2020). We congratulate the dedication of the organizers and co-authors to carry out this work and we thank the organizations that support the Summit Day to transform more and more lives. Antonio Muniz Founder of the Jornada Colaborativa and JornadaCast Carla Krieger Leader of the organizing and curatorial team Co-authors: Alexandre Cezilla Alexandre Conceição Ana Cláudia Rodrigues Antonio Muniz Arlete Lemos de Vasconcelos Atila Belloquim Bruno Camargo Carla Krieger Felipe Oliveira Flavia Lins Gabriel de Oliveira Guayçara G. agile team maturity assessment: Digital Transformation: What is the Company of Today? Andrea Bencsik, Anastasia Kulachinskaya, 2023-12-21 This book offers the latest research on organizational management, knowledge management, organizational functioning, organizational digitalization, and other issues of modern company development. The book proposes to look at the pool of these problems through the prism of building various models for implementing digital transformation of business and processes. This book is intended for both young and experienced scientists who want to get acquainted with latest trends and data to use them in their research.

agile team maturity assessment: Information Systems Marinos Themistocleous, Paulo Rupino da Cunha, 2019-01-11 This book constitutes selected papers from the 15th European, Mediterranean, and Middle Eastern Conference, EMCIS 2018, held in Limassol, Cyprus, in October 2018. EMCIS is dedicated to the definition and establishment of Information Systems as a discipline of high impact for the methodical community and IS professionals, focusing on approaches that facilitate the identification of innovative research of significant relevance to the IS discipline. The 34 full and 8 short papers presented in this volume were carefully reviewed and selected from a total of 108 submissions. They were organized in topical sections named: blockchain technology and applications; big data and analytics; cloud computing; digital services and social media; e-government; healthcare information systems; IT governance; and management and organizational issues in information systems.

agile team maturity assessment: Collaboration and Technology Carl Gutwin, Sergio F. Ochoa, Julita Vassileva, Tomoo Inoue, 2017-07-06 This book constitutes the refereed proceeding of the 23rd International Conference on Collaboration and Technology, CRIWG 2017, held in Saskatoon, Canada, in August 2017. The 14 full papers presented together with 5 work-in-progress papers were carefully reviewed and selected from 33 submissions. The papers focus on collaboration technology design, development, and evaluation. The background research is influenced by a number disciplines, such as computer science, management science, information systems, engineering, psychology, cognitive sciences, and social sciences

agile team maturity assessment: Systems, Software and Services Process Improvement

Alastair Walker, Rory V. O'Connor, Richard Messnarz, 2019-09-09 This volume constitutes the refereed proceedings of the 26th European Conference on Systems, Software and Services Process Improvement, EuroSPI conference, held in Edinburgh, Scotland, in September 2019. The 18 revised full papers presented were carefully reviewed and selected from 28 submissions. They are organized in topical sections: Visionary Papers, SPI and Safety and Security, SPI and Assessments, SPI and Future Qualification & Team Performance, and SPI Manifesto and Culture. The selected workshop papers are also presented and organized in following topical sections: GamifySPI, Digitalisation of Industry, Infrastructure and E-Mobility. -Best Practices in Implementing Traceability. -Good and Bad Practices in Improvement. -Functional Safety and Cybersecurity. -Experiences with Agile and Lean. -Standards and Assessment Models. -Team Skills and Diversity Strategies. -Recent Innovations.
