national university of singapore mathematics: An Evolution of Mathematics Curriculum

Where It Was, Where It Stands and Where It Is Going OECD, 2024-12-18 The OECD Future of Education and Skills 2030 report on mathematics curriculum presents first-of-its-kind comparative data on how countries are adapting curricula to meet the demands of the 21st century. The project's unique data illustrate a 25-year evolution of mathematics curricula in various countries, looking at content coverage and the integration of essential 21st-century skills like problem-solving, critical thinking, and data literacy. The findings show how mathematics as a school discipline – a traditionally “hard-to-change” subject given its foundational and hierarchical nature – is undergoing transformation to meet societal and technological demands. Using a collaborative “co-creation” approach, the report synthesises inputs from a wide range of stakeholders including policy makers, academic experts, school leaders, teachers, NGOs, social partners and, most importantly, students. This broad, inclusive perspective enriches the report with insights on implementation gaps, students' voice, and promising examples on how to embed future-oriented competencies alongside rigorous content into mathematics curriculum.

His work was essential for establishing the leading role of New Zealand in this area. The research interests of Cristian Calude are reflected in the topics covered by the 32 papers included in this book, namely: algorithmic information theory, algorithms, automata and formal languages, computing and natural sciences, computability and applications, logic and applications, philosophy of computation, physics and computation, and unconventional models of computation. They have been organized into four parts. The first part consists of papers discussing his life achievements. This is followed by papers in the three general areas of complexity, computability, and randomness; physics, philosophy (and logic), and computation; and algorithms, automata, and formal models (including unconventional computing).
