cdm approved code of practice: Understanding Its Role in Construction Safety

cdm approved code of practice plays a vital role in ensuring health and safety standards within the construction industry. If you've ever been involved in a building project, whether residential or commercial, you might have come across references to CDM regulations and their accompanying approved code of practice. But what exactly does this code entail, and why is it so important? This article dives deep into the CDM approved code of practice, explaining its purpose, how it impacts various stakeholders, and offering practical insights to help you navigate its requirements with confidence.

What is the CDM Approved Code of Practice?

The CDM approved code of practice (ACOP) is a detailed set of guidelines designed to assist those involved in construction projects in complying with the Construction (Design and Management) Regulations. These regulations were introduced to improve health, safety, and welfare throughout the lifecycle of a construction project—from planning and design through to construction and eventual handover.

Unlike the regulations themselves, the ACOP provides practical advice on how to meet legal duties in a way that is clear, actionable, and accessible. While the code itself is not law, following it typically means you are complying with legal obligations related to health and safety. Conversely, failing to follow the ACOP could result in legal challenges or penalties if an incident occurs.

The Purpose Behind the CDM Approved Code of Practice

The primary goal of the CDM ACOP is to reduce risks and prevent accidents on construction sites. Construction work carries inherent hazards, from working at heights to handling heavy machinery and materials. By establishing clear roles, responsibilities, and procedures, the code helps create safer working environments for everyone—from clients and designers to contractors and workers.

The code also emphasizes communication and coordination among parties. This collaboration ensures that safety considerations are integrated from the earliest design stages right through to project completion, rather than being an afterthought.

Key Stakeholders and Their Responsibilities Under the CDM Approved Code of Practice

One of the strengths of the CDM approved code of practice is its clarity in defining the duties of each party involved in a construction project. Understanding these roles is crucial for compliance and smooth project execution.

Clients

Clients are the people or organizations for whom the construction work is carried out. According to the CDM ACOP, they must:

- Make suitable arrangements for managing a project, including allocating sufficient time and resources.
- Ensure that those they hire (designers, contractors, etc.) have the necessary skills, knowledge, and experience.
- Provide pre-construction information to help identify hazards early on.
- Appoint a principal designer and principal contractor when necessary.

Principal Designers

The principal designer is responsible for planning, managing, and monitoring health and safety during the design phase. Their duties include:

- Identifying and eliminating or controlling risks through design decisions.
- Coordinating the health and safety aspects of design work performed by others.
- Preparing and updating the health and safety file to be handed over to the client.

Principal Contractors

Principal contractors take charge once construction work begins, managing the site and ensuring compliance with safety protocols. Their responsibilities under the CDM approved code of practice include:

- Developing a construction phase plan that outlines how health and safety will be managed.
- Coordinating the work of contractors and other workers on-site.
- Ensuring adequate welfare facilities and site safety measures.

Contractors and Workers

All contractors and workers have a duty to follow the instructions and safety policies laid out by the principal contractor and to take care of their own and others' health and safety.

How the CDM Approved Code of Practice Impacts Project Management

Incorporating the CDM approved code of practice into project management processes can significantly improve outcomes. Here's how:

Early Risk Management

By emphasizing risk assessment from the start, the code encourages teams to identify hazards during design and planning phases. This proactive approach can prevent costly redesigns or accidents later on.

Clear Communication Channels

The CDM ACOP promotes transparent communication among all parties. Regular meetings, sharing of information, and clear reporting lines help avoid misunderstandings that could compromise safety.

Documentation and Record-Keeping

Maintaining thorough documentation, such as health and safety files and construction phase plans, is a core part of the code. These records not only support compliance but also serve as valuable references for future maintenance or modifications.

Practical Tips for Implementing the CDM Approved Code of Practice

Navigating the CDM approved code of practice might feel overwhelming at first, especially for smaller firms or first-time clients. Here are some tips to help make the process smoother:

- **Start Early:** Engage with health and safety considerations from the conceptual stages of your project.
- **Choose Competent Professionals:** Ensure that designers, contractors, and consultants have proven experience managing CDM responsibilities.
- **Appoint a Principal Designer:** This role is mandatory on projects involving more than one contractor, and a good principal designer can make all the difference.
- **Develop a Detailed Construction Phase Plan:** This plan should cover site rules, emergency procedures, and risk controls.
- **Regularly Review Safety Measures:** Construction sites are dynamic, so ongoing monitoring and adjustment of safety protocols are essential.
- **Keep Everyone Informed:** Frequent communication ensures that all team members understand their duties and any changes.

Common Misconceptions About the CDM Approved Code of Practice

Despite its importance, there are some misunderstandings surrounding the CDM ACOP that can lead to non-compliance or missed opportunities for safer working environments.

It Only Applies to Large Projects

Some believe the CDM regulations and their approved code apply solely to large-scale construction jobs. In reality, they cover virtually all construction work, including small renovations and maintenance, depending on the scope and number of contractors involved.

It's Just Bureaucracy

While the documentation and planning requirements might seem like paperwork, they serve a purpose: reducing accidents and legal risks. Viewing the CDM ACOP as an integral part of project success rather than a hurdle can change how you approach compliance.

Only Health and Safety Experts Need to Understand It

Everyone involved in a construction project benefits from understanding the code—clients, designers, contractors, and workers alike. This shared knowledge fosters a culture of safety awareness.

The Evolution and Future of the CDM Approved Code of Practice

The CDM regulations and their approved code of practice have evolved since their initial introduction, reflecting changes in construction practices, technology, and safety culture. The latest versions place greater emphasis on collaboration, digital tools, and sustainability.

Looking ahead, we can expect continued integration of digital project management platforms that incorporate CDM requirements seamlessly, making compliance more straightforward. Additionally, there's growing attention on mental health and wellbeing, broadening the scope of 'health and safety' considerations.

Navigating the CDM approved code of practice may seem complex, but understanding its principles and applying them diligently can lead to safer, more efficient construction projects. Whether you are a client commissioning a build or a contractor working on-site, the code offers a roadmap to managing risks thoughtfully and responsibly. Embracing its guidance not only helps you comply with the law but also contributes to a construction culture where everyone goes home safe and sound.

Frequently Asked Questions

What is the CDM Approved Code of Practice (ACOP)?

The CDM Approved Code of Practice (ACOP) is official guidance issued by the Health and Safety Executive (HSE) in the UK that provides practical advice on how to comply with the Construction (Design and Management) Regulations 2015. It helps duty holders understand their legal duties to improve health, safety, and welfare in construction projects.

Who must follow the CDM Approved Code of Practice?

The CDM ACOP applies to all parties involved in construction projects in Great Britain, including clients, designers, contractors, and workers. It ensures everyone understands their responsibilities under the Construction

(Design and Management) Regulations 2015.

What are the key duties outlined in the CDM Approved Code of Practice?

Key duties in the CDM ACOP include appointing the right people at the right time, ensuring adequate planning and management of health and safety risks, providing appropriate information and training, and maintaining cooperation and coordination among all parties involved in the construction project.

Is compliance with the CDM Approved Code of Practice mandatory?

While compliance with the CDM ACOP is not legally mandatory, following it is considered sufficient to comply with the law. If a duty holder chooses not to follow the ACOP, they must prove that their alternative approach achieves the same or better standard of health and safety.

How does the CDM Approved Code of Practice help improve construction site safety?

The CDM ACOP helps improve construction site safety by promoting thorough planning, risk assessment, clear communication, and defined roles and responsibilities. This proactive approach reduces accidents, injuries, and health risks throughout the construction process.

Where can I access the latest version of the CDM Approved Code of Practice?

The latest version of the CDM Approved Code of Practice can be accessed for free on the Health and Safety Executive (HSE) website. It is regularly updated to reflect changes in regulations and best practices in construction health and safety management.

CDM Approved Code of Practice: Navigating Construction Safety and Compliance

cdm approved code of practice represents a cornerstone in the UK's regulatory framework aimed at ensuring health and safety within the construction industry. The Construction (Design and Management) Regulations 2015 (CDM 2015) govern the planning, management, and execution of construction projects, and the CDM Approved Code of Practice (ACOP) serves as a practical guide to meeting these legal requirements effectively. For professionals ranging from clients and designers to contractors and workers, understanding this code is essential to mitigate risks, maintain compliance, and foster a culture of safety on site.

Understanding the CDM Approved Code of Practice

The CDM Approved Code of Practice translates the legal obligations set out in CDM 2015 into actionable guidance. It is not law itself but provides authoritative advice that, if followed, will ensure compliance with the regulations. The Health and Safety Executive (HSE) in the UK publishes and updates the ACOP, reflecting current best practices and lessons learned from industry developments.

One pivotal aspect of the CDM ACOP is its focus on the distribution of responsibilities among duty holders. Clients, designers, principal contractors, contractors, and workers all have clearly defined roles. This clarity helps reduce ambiguity in managing health and safety risks, which historically has been a challenge in complex construction projects.

Key Elements and Responsibilities

The CDM Approved Code of Practice outlines specific duties across different parties involved in construction projects:

- **Clients:** Ensure that health and safety are prioritized from the outset. This includes appointing competent duty holders, providing sufficient time and resources, and maintaining effective communication.
- **Designers:** Minimize foreseeable risks through design decisions and provide adequate information for safe construction and maintenance.
- **Principal Contractors:** Coordinate health and safety management on multi-contractor sites, ensuring that site rules are enforced and risks controlled.
- **Contractors:** Follow health and safety plans, cooperate with other contractors, and ensure their workers are properly trained and supervised.
- **Workers:** Comply with site rules, use equipment properly, and report hazards promptly.

By delineating these responsibilities, the CDM ACOP fosters collaboration and accountability, which are critical to reducing accidents and improving overall project outcomes.

Impact of the CDM Approved Code of Practice on Construction Projects

The practical impact of adhering to the CDM Approved Code of Practice is significant. According to HSE statistics, construction remains one of the highest-risk industries in the UK, accounting for a considerable percentage of workplace injuries and fatalities. The CDM framework, reinforced by the ACOP, has contributed to measurable improvements in safety standards by encouraging proactive risk management rather than reactive responses.

One notable feature of the ACOP is its emphasis on early planning. By integrating health and safety considerations at the design and pre-construction stages, projects can avoid costly delays and rework associated with accidents or regulatory breaches. This approach also aligns with modern project management methodologies that prioritize sustainability, efficiency, and worker welfare.

Comparison with Previous Versions

The 2015 iteration of the CDM regulations and its accompanying ACOP introduced several changes compared to earlier versions, such as the 2007 CDM Regulations. Key differences include:

- 1. Simplification of Roles:** The introduction of a single 'principal contractor' and 'principal designer' role replaced multiple coordination roles, streamlining communication and accountability.
- 2. Client Responsibilities:** Clients now have a more explicit duty to ensure management arrangements are in place, emphasizing their influence over project safety.
- 3. Applicability:** The regulations apply to virtually all construction projects, including small-scale domestic works, closing previous loopholes.
- 4. Focus on Competence:** Greater emphasis on appointing competent duty holders and providing adequate resources.

These changes have generally been welcomed by industry professionals for clarifying duties and enhancing the regulatory environment, although some critics argue that smaller firms face challenges in meeting increased documentation and management demands.

Practical Application and Challenges

Implementing the CDM Approved Code of Practice is not without challenges. For many construction stakeholders, especially smaller contractors or new entrants, navigating the detailed requirements can be daunting. Ensuring that risk assessments, method statements, and health and safety plans are comprehensive and up to date requires dedicated effort and expertise.

Moreover, the ACOP underscores the importance of communication and cooperation across all parties, which can be complex on projects involving multiple contractors or subcontractors. Failure to maintain clear lines of communication often leads to gaps in safety management, increasing the risk of accidents.

However, the benefits of compliance are substantial. Projects that embrace the CDM ACOP tend to experience fewer accidents, improved worker morale, and enhanced reputations. This can translate into competitive advantages, such as winning future contracts or meeting client demands for high safety standards.

Role of Technology in Supporting CDM Compliance

Modern technology increasingly supports adherence to the CDM Approved Code of Practice. Digital tools such as Building Information Modeling (BIM), safety management software, and mobile applications facilitate real-time communication, risk tracking, and documentation management.

For example, BIM enables designers and contractors to visualize potential hazards during the design phase, aligning perfectly with the CDM ACOP's emphasis on early risk elimination. Similarly, mobile safety apps allow workers to report hazards instantly, ensuring prompt action and documentation.

These technological advances not only streamline compliance but also foster a proactive safety culture, making the CDM ACOP's principles more accessible and effective.

Legal Implications and Enforcement

While the CDM Approved Code of Practice itself is guidance, failure to comply with its provisions can lead to legal consequences because it interprets the requirements of CDM regulations. Courts and enforcement agencies like the HSE often refer to the ACOP when assessing whether duty holders have met their legal obligations.

Non-compliance can result in penalties ranging from improvement notices to significant fines or even imprisonment in severe cases involving gross

negligence or fatal accidents. Therefore, adherence to the ACOP is not merely a best practice but a critical safeguard against legal and financial risks.

Training and Competency Development

A recurring theme within the CDM Approved Code of Practice is the necessity of ensuring competence among all duty holders. This extends beyond mere qualifications to include relevant experience, skills, and understanding of specific project risks.

Effective training programs aligned with the ACOP's guidance help organizations embed safety into everyday operations. Continuous professional development and refresher courses are equally important to keep pace with evolving regulations and industry standards.

Investing in competency development not only fulfills regulatory demands but also empowers workers to contribute meaningfully to a safer construction environment.

Navigating the CDM Approved Code of Practice demands a comprehensive understanding of its provisions and a commitment to integrating safety into every project phase. Its role in clarifying responsibilities, promoting early planning, and emphasizing competence has reshaped construction health and safety in the UK. As the construction sector evolves, continuous adaptation to this framework remains essential for protecting lives and ensuring successful project delivery.

cdm approved code of practice: Code of Practice for Project Management for Construction and Development CIOB (The Chartered Institute of Building), 2014-07-23 The first edition of the Code of Practice for Project Management for Construction and Development, published in 1992, was groundbreaking in many ways. Now in its fifth edition, prepared by a multi-institute task force coordinated by the CIOB and including representatives from RICS, RIBA, ICE, APM and CIC, it continues to be the authoritative guide and reference to the principles and practice of project management in construction and development. Good project management in construction relies on balancing the key constraints of time, quality and cost in the context of building functionality and the requirements for sustainability within the built environment.

Thoroughly updated and restructured to reflect the challenges that the industry faces today, this edition continues to drive forward the practice of construction project management. The principles of strategic planning, detailed programming and monitoring, resource allocation and effective risk management, widely used on projects of all sizes and complexity, are all fully covered. The integration of Building Information Modelling at each stage of the project life is a feature of this edition. In addition, the impact of trends and developments such as the internationalisation of construction projects and the drive for sustainability are discussed in context. Code of Practice will be of particular value to clients, project management professionals and students of construction, as well as to the wider construction and development industries. Much of the information will also be relevant to project management professionals operating in other commercial spheres.

cdm approved code of practice: Code of Practice for Project Management for Construction and Development Chartered Institute of Building,, 2010-01-19 In 1991 the Chartered Institute of Building initiated a multi-institute task force and a Code of Practice for Project Management for Construction and Development was published in 1992, with second and third editions in 1996 and 2002. Like previous editions, this fourth edition has been extensively updated. The fourth edition includes a range of new illustrations and high profile examples, and features new guidance on: CDM regulations Project planning Change management Project management software Mobile technology The range of procurement options The European perspective Contracts Effective project management involves the assessment and management of risk, and this is a strong theme throughout the Code. The Code of Practice provides an authoritative guide to the principles and practice of construction project management. It will be a key reference source for clients, contractors and professionals, irrespective of the size and nature of the project.

cdm approved code of practice: Professional Practice for Landscape Architects Rachel Tennant, Nicola Garmory, Clare Winsch, 2015-09-16 Professional Practice for Landscape Architects third edition deals with the practical issues of being a successful landscape architect professional. Endorsed by the Landscape Institute, this book is an indispensable guide for licentiate members of the Institute on their Pathway to Chartership. It follows the revised 2013 syllabus covering all aspects of professional judgement, ethics and values, the legal system, organisation and management, legislation and the planning system, environmental policy and control, procurement and implementation. It also serves as a reminder and reference for fully qualified professionals in their everyday practice and for landscape students. Valuable information is presented in an easy to follow manner with diagrams and schedules, key acts, professional documents and contracts clearly explained and made easy to understand. A handy list of questions are included to aid with P2C revision, answers of which are found within the text.

cdm approved code of practice: Construction Project Manager's Pocket Book Duncan Cartlidge, 2015-02-20 Construction project management requires a broad range of knowledge, from technical expertise to leadership, negotiation, team building and communication. This practical no-nonsense guide covers all of the essentials of the role, including: Pre-construction activities Design management and BIM Procurement Feasibility studies Environmental management systems People skills Recommended document formats Occupancy activities Construction project management activities are tackled in the order they occur on real projects, with reference made to the RIBA Plan of Work and OGC Gateway process throughout. This is the ideal concise reference which no project manager, construction manager, or quantity surveyor should be without.

Information is presented in plain English, and broken down into separate A-Z sections containing legislative summaries, key points, handy fact boxes and sources of further information. All the guidance is written and compiled by our team of expert

authors, including top law firms, surveyors, safety consultants and regulatory bodies. Workplace Law's Health and Safety, Premises and Environment Handbook is aimed at all those with an interest in the health and safety, premises and environmental management aspects of the workplace, and so our readership consists mainly of Health and Safety managers, officers and directors, Facilities Managers, as well as General Managers and Directors of small businesses.

cdm approved code of practice: Structural Engineer's Pocket Book Fiona Cobb, 2014-11-11 Functions as a Day-to-Day Resource for Practicing Engineers... The hugely useful Structural Engineer's Pocket Book is now overhauled and revised in line with the Eurocodes. It forms a comprehensive pocket reference guide for professional and student structural engineers, especially those taking the IStructE Part 3 exam. With stripped-down basic material—tables, data, facts, formulae, and rules of thumb—it is directly usable for scheme design by structural engineers in the office, in transit, or on site. ...And a Core Reference for Students It brings together data from many different sources, and delivers a compact source of job-simplifying and time-saving information at an affordable price. It acts as a reliable first point of reference for information that is needed on a daily basis. This third edition is referenced throughout to the structural Eurocodes. After giving general information and details on actions on structures, it runs through reinforced concrete, steel, timber, and masonry. Provides essential data on steel, concrete, masonry, timber, and other main materials Pulls together material from a variety of sources for everyday work Serves as a first point of reference for structural and civil engineers A core structural engineering book, Structural Engineer's Pocket Book: Eurocodes, Third Edition benefits both students and industry professionals.

cdm approved code of practice: Architectural Design and Regulation Rob Imrie, Emma Street, 2011-01-21 From the earliest periods of architecture and building, architects' actions have been conditioned by rules, regulations, standards, and governance practices. These range from socio-cultural and religious codes seeking to influence the formal structure of settlement patterns, to prescriptive building regulations specifying detailed elements of design in relation to the safety of building structures. In Architectural Design and Regulation the authors argue that the rule and regulatory basis of architecture is part of a broader field of socio-institutional and political interventions in the design and development process that serve to delimit, and define, the scope of the activities of architects. The book explores how the practices of architects are embedded in complex systems of rules and regulations. The authors develop the understanding that the rules and regulations of building form and performance ought not to be counterpoised as external to creative processes and practices, but as integral to the creation of well-designed places. The contribution of Architectural Design and Regulation is to show that far from the rule and regulatory basis of architecture undermining the capacities of architects to design, they are the basis for new and challenging activities that open up possibilities for reinventing the actions of architects.

cdm approved code of practice: JCT98 Building Contract: Law and Administration Issaka Ndekugri, Michael Rycroft, 2014-02-04 The Joint Contracts Tribunal's Standard Form of Building Contract is the most common contract used in the UK to procure building work. Understanding it is a core part of any construction student's degree and a vital part of the working life of professionals in the construction industry. 'The JCT98 Building Contract' works through the contract

systematically explaining it in easy-to-follow language, covering all contract issues thoroughly and illustrating with case law examples the current situation and latest amendments. It is ideal reading for both the student of construction and the professional seeking to update their knowledge.

cdm approved code of practice: Construction Safety Management Systems Steve Rowlinson, 2004-04-29 The construction industry has a distressingly poor safety record, whether measured in absolute terms or alongside other industries. The level of construction safety in a country is influenced by factors such as variations in the labour forces, shifting economies, insurance rates, legal ramifications and the stage of technological development. Yet the problem is a world-wide one, and many of the ways of tackling it can be applied across countries. Effective tools include designing, preplanning, training, management commitment and the development of a safety culture. The introduction and operation of effective safety management systems represents a viable way forwards, but these systems are all too rarely implemented. How can this be done? Should we go back to prescriptive legislation? This book considers these questions by drawing together leading-edge research papers from the proceedings of an international conference conducted by a commission (W099) on Safety and Health on Construction Sites of CIB, the international council of building research organisations.

cdm approved code of practice: The Design Manager's Handbook John Eynon, CIOB (The Chartered Institute of Building), 2013-01-23 Design management as a recognised role in the built environment industry is relatively new, initially arising from the need for better co-ordination and delivery of design information from design teams to main contractors - particularly important as procurement routes involving contractor led design have become much more commonplace. The advent of design packages driven by specialist sub-contractors has also increased the need for co-ordination and management of the design process. With the growing complexity of construction projects, effective design management is increasingly central to project success. BIM, as it gains acceptance across the industry will undoubtedly have a huge impact on project delivery process and the role of the Design Manager. The CIOB Design Manager's Handbook covers subjects such as design process and management tools, the role of the Design Manager, value management and innovation, procurement routes and implications, people dynamics, and factors that will affect the development of the Design Manager's role in the future, including BIM. It will ensure Design Managers understand the processes, tools and skills that are required to be successful in the role, and will assist them in delivering real value to complex construction projects. Written for both the Design Manager practitioner and students on construction related degree courses, anyone interested in construction based design management will also find the book useful.

cdm approved code of practice: RIBA Job Book Nigel Ostime, 2019-07-25 The RIBA Job Book is the Royal Institute of British Architects' long-established and recognised standard reference for running construction projects. This major new update fully reflects the new RIBA Plan of Work 2013 and contemporary working practice. It embraces themes of collaboration within the project team, better briefing, advances in information technology and BIM, and the continued importance of sustainability including valuable detail on a range of 'cradle to grave' processes in a building project. Applicable to all forms of procurement and to all sizes and types of project, the RIBA Job Book provides a systematic operational framework that is comprehensive in scope and easy-to-follow, and which examines step-by-step the key obligations of the architect or lead consultant. Setting out all the actions to be undertaken throughout a project, it includes invaluable checklists, notes and practical guidance.

cdm approved code of practice: Introduction to Health and Safety at Work Phil Hughes, Ed Ferrett, 2009 Introduction to Health and Safety at Work has been developed for the NEBOSH National General Certificate in Occupational Safety and Health. Each element of the syllabus has a dedicated chapter and both taught units are covered in this book. A chapter on international aspects also makes this book suitable for the NEBOSH International General Certificate in Occupational Safety and Health. Previous editions of this book have been used for other NVQ level 3 and 4 courses in health and safety. Full colour pages and hundreds of illustrations bring health and safety to life.

To make studying easier, each chapter starts with learning outcome summaries and ends with questions taken from recent NEBOSH examinations. Specimen answers and a study skills chapter aid exam preparation. As an introduction to all areas of occupational safety and health the book acts as a practical reference for managers and directors with health and safety responsibilities, and safety representatives. It covers the essential elements of health and safety management, the legal framework, risk assessment and control standards and includes handy forms and checklists. New in this edition: Updated throughout in line with changes in the regulations Learning outcomes now included at the beginning of each chapter Companion website with downloadable health and safety forms *Endorsed by NEBOSH *Student-friendly presentation in full colour, packed with illustrations and photographs *Revision questions and sample answers taken from recent NEBOSH examinations to test your knowledge *Includes a summary of the main legal requirements, ideal for both students and managers A free companion website is also available at:

cdm approved code of practice: Construction Planning, Programming and Control Brian Cooke, Peter Williams, 2025-01-13 An essential introduction to the management of building projects Construction management is a complex discipline with many facets. The essence of construction management is the delivery of construction projects to meet the client's goals whilst recognising the commercial interests of the many designers, consultants and contractors involved. Balancing the expected quality outcomes, the highest safety standards and time and budget pressures is not an easy task. Therefore, students and practitioners looking to understand the core principles of construction management need an authoritative, accessible and comprehensive text on the subject. Since its first edition in 1998, Construction Planning, Programming and Control has met this need with its practical approach to the management of construction projects. The book covers the principles and practice of project time and cost control and includes key related topics and more. It places the subject matter in the context of the challenges facing the construction industry and explains complex issues in a practical and understandable way. Readers of the fourth edition of Construction Planning, Programming and Control will also find detailed coverage of: Procurement and contracts, supply chain and risk management and health and safety management including CDM 2015 JCT 2016, NEC4; ICC and FIDIC conditions of contract Method statements and the development of safe systems of work Three new major case studies including an in-depth look at

HS2 Fully updated content to reflect new thinking with regard to modern methods of construction (MMC), building information modelling (BIM) and the latest planning and cost management software Construction Planning, Programming and Control is an invaluable reference for students of construction management, surveying, civil engineering, and more.
