

Luftwaffe secret projects fighters 1939 1945

Luftwaffe Secret Projects Fighters 1939 1945: Exploring Germany's Hidden Aviation Innovations

Luftwaffe secret projects fighters 1939 1945 represent a fascinating and often overlooked chapter of aviation history. During World War II, the German Luftwaffe was not only engaged in fierce aerial combat but also pushed the boundaries of aircraft design with a series of secret and experimental fighter projects. These projects were born out of necessity, desperation, and visionary engineering, as the war intensified and the need for superior air power grew. Many of these designs never left the drawing board or saw only limited production, yet they reveal a remarkable glimpse into the cutting-edge technology and ambitious aspirations of wartime Germany.

In this article, we'll delve into some of the most intriguing Luftwaffe secret projects fighters between 1939 and 1945. Along the way, we'll explore the technological innovations, the strategic thinking behind these projects, and what made them stand out in the broader context of World War II aviation.

The Context Behind Luftwaffe Secret Projects Fighters 1939 1945

Before diving into specific aircraft, it's important to understand the environment in which these secret projects emerged. The Luftwaffe was initially a dominant force in the early years of the war, with fighters like the Messerschmitt Bf 109 and the Focke-Wulf Fw 190 leading their air campaigns. However, as the war progressed, Allied air forces improved rapidly, introducing superior aircraft and tactics.

This shift put immense pressure on German aircraft designers to conceive next-generation fighters that could regain air superiority. Limited resources, Allied bombing campaigns, and shifting priorities meant that many projects remained experimental or secretive. The term "Luftwaffe secret projects fighters 1939 1945" thus encapsulates a wide array of aircraft concepts, from jet-powered interceptors to rocket-propelled fighters, many of which were developed in utmost secrecy and sometimes in underground facilities.

Jet and Rocket-Powered Fighters: The Vanguard

of Luftwaffe Secret Projects

One of the most notable trends in Luftwaffe secret projects fighters 1939 1945 was the shift toward jet and rocket propulsion. Germany was pioneering in this realm, seeking to leapfrog traditional piston-engine fighters.

Messerschmitt Me 262 – The First Operational Jet Fighter

Though the Me 262 became the world's first operational jet fighter, its development was shrouded in secrecy for much of the early war years. Initiated before the war but accelerated during it, the Me 262 combined swept wings and twin jet engines for unprecedented speed. Despite technical and political challenges, it entered combat in 1944, offering a glimpse of the future of aerial combat.

The Me 262 was a major influence on later Luftwaffe secret projects fighters 1939 1945, inspiring even more ambitious designs that sought to push the boundaries of speed, armament, and maneuverability.

Heinkel He 162 Volksjäger

Towards the war's end, desperation grew, and the Heinkel He 162 was conceived as a cheap, easily produced jet fighter that could be flown by less experienced pilots. Known as the "Volksjäger" or "People's Fighter," this aircraft utilized a single BMW turbojet mounted above the fuselage.

Though rushed into production, the He 162 exemplified how Luftwaffe secret projects fighters 1939 1945 were evolving to meet dire circumstances with innovative, if sometimes impractical, solutions.

Messerschmitt Me 163 Komet – The Rocket-Powered Interceptor

One of the most radical Luftwaffe secret projects fighters 1939 1945 was the Me 163, a rocket-powered interceptor capable of astonishing speed and climb rates. Its armament and performance made it a deadly interceptor against Allied bombers, but its operational range was limited, and it was dangerous to fly.

The Me 163's development reflected both the ambition and risks involved in secret fighter projects that sought to leverage new propulsion technologies for tactical advantage.

Unrealized and Experimental Designs: The Hidden Facets of Luftwaffe Fighters

Beyond the few that reached operational status, many Luftwaffe secret projects fighters 1939 1945 remained experimental or never left the blueprint stage. These designs often incorporated radical ideas and futuristic technology.

Focke-Wulf Ta 183 Huckebein

The Ta 183 was a jet fighter concept developed late in the war that featured swept wings and a single jet engine, bearing similarities to post-war jet fighters developed by other nations. Though it never flew, it influenced future aircraft designs outside Germany.

Its development symbolizes the Luftwaffe's push toward modern aerodynamics and jet propulsion in secret projects.

Horten Ho 229 – The Flying Wing Fighter

The Horten brothers designed the Ho 229, a jet-powered flying wing that stood out for its stealthy design and innovative aerodynamics. This fighter was intended to be faster and harder to detect than conventional aircraft.

Though it didn't enter operational service, the Ho 229's radical design was a significant step in aviation history, hinting at stealth technology concepts decades ahead of their time.

Other Notable Concepts

Several other Luftwaffe secret projects fighters 1939 1945 included designs such as:

- Arado E.561: A twin-jet heavy fighter project.
- Junkers EF 128: A single-seat jet fighter interceptor.
- Bachem Ba 349 Natter: A vertical takeoff rocket interceptor designed for point-defense against bombers.

These projects illustrate the breadth of experimentation and the willingness to explore unconventional approaches under the pressures of wartime.

Challenges and Realities of Luftwaffe Secret Projects Fighters 1939 1945

While the ingenuity behind these secret projects was impressive, many faced significant hurdles. Resource shortages, Allied bombing of production facilities, and internal conflicts within the German military-industrial complex hindered their progress.

Moreover, some projects prioritized speed and firepower at the expense of pilot safety and reliability. For example, rocket-powered planes like the Me 163 and Ba 349 had dangerous fuel mixtures and limited flight endurance, which made them risky to operate.

The secrecy surrounding these projects also meant that many designs lacked thorough testing, leading to technical problems that could not be resolved before the war's end.

Strategic Impact and Legacy

Despite their limited operational impact, Luftwaffe secret projects fighters 1939 1945 had a lasting influence on post-war aviation. Many Allied countries captured German engineers and technology, which accelerated jet development in the United States, Soviet Union, and elsewhere.

The experimental designs pioneered aspects of aerodynamics, propulsion, and materials that became standard in later decades. These secret projects demonstrated how innovation often arises in times of crisis, blending visionary ideas with practical challenges.

Understanding Luftwaffe Secret Projects Fighters Through Historical Research

Today, Luftwaffe secret projects fighters 1939 1945 remain a popular subject among aviation historians, modelers, and enthusiasts. Museums and archives continue to uncover documents, blueprints, and prototypes that shed light on these enigmatic aircraft.

Studying these projects offers valuable insights into the technological race of World War II and the complex interplay between innovation, strategy, and desperation.

For those interested in deeper exploration, examining primary sources such as Luftwaffe test reports, pilot accounts, and engineering notes can reveal the fascinating stories behind these secret fighters.

The story of Luftwaffe secret projects fighters 1939 1945 is a testament to human ingenuity under pressure, showcasing some of the most advanced and ambitious aircraft designs of the era. While many remained hidden or unfinished, their legacy resonates in the evolution of military aviation and the ongoing quest to master the skies.

Frequently Asked Questions

What were some of the most notable secret fighter projects of the Luftwaffe between 1939 and 1945?

Notable secret fighter projects of the Luftwaffe during 1939-1945 included the Messerschmitt Me 262 jet fighter, the Heinkel He 162 Volksjäger, and the Arado Ar 234 jet bomber. These projects aimed to gain air superiority through advanced technology such as jet propulsion and innovative designs.

How did the Messerschmitt Me 262 impact Luftwaffe fighter capabilities during World War II?

The Messerschmitt Me 262 was the world's first operational jet-powered fighter aircraft. It significantly enhanced Luftwaffe fighter capabilities by offering superior speed and firepower compared to Allied piston-engine fighters. However, its late introduction and production issues limited its overall impact on the war.

What role did the Heinkel He 162 play in Luftwaffe's secret fighter projects?

The Heinkel He 162, also known as the Volksjäger, was a secret project aimed at producing a cheap, easy-to-build jet fighter to counter Allied air superiority. Introduced late in the war, it featured a simple design and was powered by a single turbojet engine, but it saw limited combat action due to rushed development and resource constraints.

Were there any experimental or prototype fighters developed by the Luftwaffe that never saw combat?

Yes, several experimental and prototype fighters were developed but never saw combat. Examples include the Horten Ho 229, a jet-powered flying wing, and the Dornier Do 335 Pfeil, a twin-engine heavy fighter with a unique push-pull propeller configuration. These projects showcased advanced concepts but were hindered by technical challenges and the deteriorating war situation.

How did secret fighter projects influence post-war aviation technology?

Luftwaffe secret fighter projects greatly influenced post-war aviation, especially in jet propulsion and aerodynamics. Technologies developed for aircraft like the Me 262 and Ho 229 were studied and integrated into Allied and Soviet aircraft designs, accelerating the development of modern jet fighters and stealth technology.

What challenges did the Luftwaffe face in developing secret fighter projects during 1939-1945?

The Luftwaffe faced numerous challenges including resource shortages, Allied bombing campaigns targeting production facilities, technical difficulties with jet engines, and pressure to deploy aircraft quickly. These factors caused delays and limited the mass production and effectiveness of secret fighter projects.

How secret were the Luftwaffe's advanced fighter projects, and did the Allies know about them during the war?

While some Luftwaffe advanced fighter projects were highly secretive, Allied intelligence gradually became aware of them through reconnaissance, captured documents, and interrogation of prisoners. However, the full capabilities and extent of projects like the Me 262 were not completely understood until the end of the war.

Additional Resources

Luftwaffe Secret Projects Fighters 1939 1945: An In-Depth Exploration of Germany's Experimental Aerial Arsenal

luftwaffe secret projects fighters 1939 1945 represent a fascinating and complex chapter of World War II aviation history. During this period, the German Luftwaffe embarked on numerous clandestine research and development programs aimed at revolutionizing aerial combat. These secret projects, often shrouded in mystery and marked by groundbreaking technological innovation, sought to counterbalance the Allies' growing air superiority by introducing advanced fighter aircraft with unprecedented capabilities. This article delves into the most notable secret fighter projects, their technological ambitions, tactical intentions, and the broader strategic context that shaped their development between 1939 and 1945.

The Strategic Imperative Behind Luftwaffe Secret Projects Fighters 1939 1945

As World War II progressed, the Luftwaffe faced increasing challenges in maintaining air dominance over the European theater. Early war successes, powered by proven designs like the Messerschmitt Bf 109 and Focke-Wulf Fw 190, gradually gave way to escalating Allied numerical superiority and technological advancements. The pressing need for next-generation fighters capable of outperforming enemy aircraft, intercepting strategic bombers, and surviving in contested airspace prompted the German High Command and aircraft manufacturers to pursue radical secret projects.

These clandestine programs were driven by several critical factors:

- **Technological Leapfrogging:** To regain the initiative, the Luftwaffe sought to leapfrog existing fighter technology with jet propulsion, rocket engines, and novel aerodynamic concepts.
- **Operational Necessity:** The increasing threat from Allied long-range bombers demanded interceptors with exceptional climb rates and speeds.
- **Strategic Secrecy:** Many of these projects were developed under strict secrecy to avoid Allied espionage and bombing raids.

Key Luftwaffe Secret Fighter Projects of 1939-1945

Messerschmitt Me 262 – The World's First Operational Jet Fighter

Although not entirely secret by the war's end, the development of the Messerschmitt Me 262 jet fighter began under highly classified conditions. Its innovative design incorporated twin Junkers Jumo 004 turbojet engines, enabling speeds far exceeding piston-engine fighters. The Me 262 was a technological marvel, capable of reaching speeds up to 870 km/h (540 mph), significantly outpacing Allied counterparts.

Features and Impact:

- **Jet propulsion:** Marked a revolutionary shift from propeller-driven aircraft.
- **Armament:** Equipped with four 30 mm MK 108 cannons, effective against Allied bombers.
- **Operational challenges:** Early engine unreliability and production delays hampered its full potential.

The Me 262's secret development underscored the Luftwaffe's commitment to circumventing Allied air superiority by deploying cutting-edge technology, though its late introduction limited its strategic impact.

Heinkel He 280 – The Forerunner Jet Fighter

Preceding the Me 262, the Heinkel He 280 was the Luftwaffe's first jet fighter prototype. Although it never entered operational service, it contributed valuable data on jet aircraft design. The He 280 utilized twin turbojet engines and featured a sleek, aerodynamic airframe.

Despite promising performance, the project was overshadowed by the Messerschmitt design due to engine supply issues and political dynamics within the Reich's aircraft industry. Still, the He 280 remains a significant secret project reflecting German innovation in jet propulsion during the early war years.

Messerschmitt Me 163 Komet – The Rocket-Powered Interceptor

Among the most extraordinary Luftwaffe secret projects was the Messerschmitt Me 163 Komet, the only operational rocket-powered fighter of the war. Designed for rapid climbs and short bursts of supersonic speed, the Me 163 was intended to intercept high-altitude Allied bombers.

****Pros:****

- ****Unmatched climb rate:**** Could reach 30,000 feet in under three minutes.
- ****Extreme speed:**** Top speed reportedly exceeded 950 km/h (590 mph).

****Cons:****

- ****Limited endurance:**** Rocket propulsion allowed only a few minutes of powered flight.
- ****Dangerous fuel:**** Utilized volatile propellants causing numerous accidents.
- ****Limited armament:**** Typically armed with two 30 mm cannons, insufficient for sustained combat.

The Me 163's secretive development and operational deployment symbolized the Luftwaffe's desperate push for technological superiority, despite the associated risks and tactical limitations.

Focke-Wulf Ta 183 Huckebein – The Lost Jet Fighter Vision

The Focke-Wulf Ta 183 Huckebein was an advanced jet fighter project that never reached production but influenced postwar aircraft development worldwide. Featuring a swept-wing design and a single turbojet engine, the Ta 183 promised high speeds and good maneuverability.

Its innovative design was kept secret until after the war, when it inspired Soviet and Swedish jet fighters. The Ta 183's cancellation was partially due to resource constraints and the deteriorating German war situation by 1945.

Horten Ho 229 – The Stealthy Flying Wing

One of the most intriguing Luftwaffe secret projects was the Horten Ho 229, a jet-powered flying wing designed by the Horten brothers. Its unusual design minimized radar cross-section, making it a pioneering stealth aircraft ahead of its time.

****Key Characteristics:****

- ****Flying wing configuration:**** Reduced drag and improved speed.
- ****Twin jet engines:**** Enabled speeds comparable to the Me 262.
- ****Radar evasion potential:**** Unique shape and materials aimed at reducing detection.

Despite its promise, the Ho 229 was never deployed in combat but has since attracted significant attention for its futuristic design and potential influence on modern stealth technology.

Technological Innovations and Challenges in Luftwaffe Secret Fighter Projects

The Luftwaffe's secret fighter projects from 1939 to 1945 showcased a remarkable array of technological breakthroughs. Among these were:

- ****Jet and Rocket Propulsion:**** Pioneering the transition from piston engines to jet turbines and rocket motors, enabling unprecedented speeds and climb rates.
- ****Aerodynamic Advances:**** Swept wings, flying wing designs, and streamlined fuselages improved performance and fuel efficiency.
- ****Armament Systems:**** Integration of heavy-caliber cannons optimized for bomber interception.

However, these innovations were often accompanied by significant challenges:

- **Production Difficulties:** Wartime resource shortages and Allied bombing severely limited manufacturing capabilities.
- **Pilot Training:** New technologies required specialized pilot training, often unavailable late in the war.
- **Reliability and Safety:** Early jet and rocket engines suffered from frequent failures, and volatile fuels posed serious hazards.

These factors cumulatively hindered the widespread operational use of many secret projects despite their advanced designs.

The Legacy of Luftwaffe Secret Projects Fighters 1939 1945

While many Luftwaffe secret projects fighters of 1939-1945 never reached mass production or combat readiness, their influence extended well beyond the war's end. The pioneering work on jet propulsion and novel airframes laid the groundwork for the modern jet age. Postwar aviation programs in the United States, Soviet Union, and other nations drew heavily from German research and captured technology.

Moreover, these secret projects symbolized the Luftwaffe's strategic adaptation to the evolving dynamics of aerial warfare. They reflected a potent mix of innovation, desperation, and the relentless quest for air dominance. Today, aircraft such as the Me 262 and the Horten Ho 229 continue to captivate historians and aviation enthusiasts as emblematic artifacts of one of history's most technologically dynamic periods.

In summary, the Luftwaffe secret projects fighters 1939 1945 represent a compelling intersection of advanced engineering, wartime exigency, and visionary design that profoundly shaped the trajectory of military aviation.

luftwaffe secret projects fighters 1939 1945: Secret Projects of the Luftwaffe - Vol 2 Dan Sharp, 2024-06-03 The story of Germany's WW2 bomber development programmes.

luftwaffe secret projects fighters 1939 1945: Secret Projects of the Luftwaffe - Vol 1 - Jet Fighters 1939 -1945 Dan Sharp, 2020-09-22 Germany's air ministry was quick to grasp the potential of the jet engine as early as 1938 and by 1939 several German aircraft manufacturers were already working on fighter designs that would utilize this new form of propulsion. Rocket engines too were

seen as the way of the future and companies were commissioned to design fighters around them. As the Second World War began, the urgent need to bring these advanced new types into production saw a host of innovative aircraft designs being produced which would eventually result in Messerschmitt's Me 262 jet fighter and the Me 163 rocket-propelled interceptor. And as the war progressed, efforts were increasingly made to find better ways of utilizing jet, rocket and latterly ramjet engines in fighter aircraft. Aviation companies from across Germany set their finest minds to the task and produced some of the most radical aircraft designs the world had ever seen. They proposed rotating wing ramjet fighters, arrowhead-shaped rammers, rocket-firing bat-winged gun platforms, sleek speed machines, tailless flying wings, tiny mini fighters and a host of others ranging from deadly looking advanced fighters to downright dangerous vertical launch interceptors. Secret Projects of the Luftwaffe Volume 1: Jet Fighters 1939-1945 by Dan Sharp, based on original research using German wartime documents, offers the most complete and authoritative account yet of these fascinating designs through previously unseen photographs, illustrations and period documentation from archives around the world.

luftwaffe secret projects fighters 1939 1945: Luftwaffe Secret Projects Walter Schick, Ingolf Meyer, 1997 Designs from Germany's aerodynamics engineers detail proposed military aircraft, including wing span and area, aspect ratio, length, height, weight, speed, and armament.

luftwaffe secret projects fighters 1939 1945: Luftwaffe Emergency Fighters Robert Forsyth, 2017-06-29 In late 1944, the German Air Ministry organised what it called an 'Emergency Fighter Competition' intended to produce designs for quick-to-build yet technically and tactically effective jet fighter aircraft capable of tackling the anticipated arrival of the B-29 Superfortress over Europe, as well as the British Mosquito and US P-38 Lightning which were appearing in ever greater numbers. Thus was born a cutting-edge, highly sophisticated series of aircraft including the futuristic and elegant Focke-Wulf Ta 183; the extraordinary Blohm und Voss P.212, and the state-of-the-art Messerschmitt P.1101 series. Armed with heavy cannon and the latest air-to-air rockets and missiles, these were designed to inflict carnage on American bomber formations at high speed. Using stunning three-view illustrations of each prototype along with full colour artwork, aviation expert Robert Forsyth traces the history of the extraordinary aircraft of the 'Emergency Fighter Competition', Hitler's last throw of the dice in the air war against the Allies.

luftwaffe secret projects fighters 1939 1945: British Special Projects Bill Rose, 2021-01-28 • An insight into British ambitious and often unrealistic aspirations to stay at the forefront of advanced technology such as the development of the atomic-powered warplane • The world's first military flying wing was a British design that saw operational service during the First World War • A manned rocket-ship launched from a converted V-bomber was proposed, capable of reaching the edge of space • Beautifully illustrated with many rare and unpublished photographs • Of interest to aviation and military historians, modellers, gamers and flight simulator enthusiasts Flying wings, deltas and tailless aircraft continue to generate enormous interest within the aviation community and many of the older designs still look surprisingly futuristic. British Special Projects: Flying Wings, Deltas and Tailless Designs examines the lesser-known and frequently secret British projects undertaken for research or military purposes during the last century and also covers those aircraft that were built and in some cases entered service. The first commercially successful British flying wing biplane designed by John Dunne undertook limited military reconnaissance duties during the First World War. Various flying wings followed but the German development of the delta would prove massively influential with post-war British aerodynamicists immediately recognising the potential for a new generation of high-performance designs. Parallel research into advanced flying wings would produce plans for the superb looking Barnes Wallace supersonic swing-wing bomber, although his design was too far ahead of its time to progress any further. There were also dead-end projects for bombers powered by atomic propulsion, vertical take-off concepts and over-ambitious ideas for British spacecraft that utilised delta- and blended-wing bodies, but were too technically challenging and costly to develop further. Nevertheless, many of these designs that stemmed from the simple flying wing remain influential today.

luftwaffe secret projects fighters 1939 1945: Luftwaffe Secret Projects Dieter Herwig, Heinz Rode, 2000 This eagerly awaited companion volume to the enormously popular volume on fighters looks at the might-have-been strategic German bombers. Filled with transatlantic jets and projects that were on the drawing board or in prototype form at the war's end. Full color action illustrations in contemporary markings and performance data tables show vividly what might have been achieved had the war continued beyond 1945.

luftwaffe secret projects fighters 1939 1945: Germany and the Second World War Horst Boog, Gerhard Krebs, Detlef Vogel, 2006-05-04 By the spring of 1943, after the defeat at Stalingrad, the writing was on the wall. But while commanders close to the troops on Germany's various fronts were beginning to read it, those at the top were resolutely looking the other way. This seventh volume in the magisterial 10-volume series from the Militärgeschichtliches Forschungsamt [Research Institute for Military History] shows both Germany and her Japanese ally on the defensive, from 1943 into early 1945. It looks in depth at the strategic air war over the Reich and the mounting toll taken in the Battles of the Ruhr, Hamburg, and Berlin, and at the Battle of the Radar Sets so central to them all. The collapse of the Luftwaffe in its retaliatory role led to hopes being pinned on the revolutionary V-weapons, whose dramatic but ultimately fruitless achievements are chronicled. The Luftwaffe's weakness in defence is seen during the Normandy invasion, Operation Overlord, an account of the planning, preparation and execution of which form the central part of this volume together with the landings in the south of France, the setback suffered at Arnhem, and the German counter-offensive in the Ardennes. The final part follows the fortunes of Germany's ally fighting in the Pacific, Burma, Thailand, and China, with American forces capturing islands ever closer to Japan's homeland, and culminates in her capitulation and the creation of a new postwar order in the Far East. The struggle between internal factions in the Japanese high command and imperial court is studied in detail, and highlights an interesting contrast with the intolerance of all dissent that typified the Nazi power structure. Based on meticulous research by MGFA's team of historians at Potsdam, this analysis of events is illustrated by a wealth of tables and maps covering aspects ranging from Germany's radar defence system and the targets of RAF Bomber Command and the US 8th Air Force, through the break-out from the Normandy beachhead, to the battles for Iwo Jima and Okinawa.

luftwaffe secret projects fighters 1939 1945: Germany and the Second World War, 1990 Volume VII of the 'Germany and the Second World War' series looks at Germany and her Japanese ally on the defensive after the tide of war turned in 1943. An exhaustive study of the air war over the Reich and the Luftwaffe's growing impotence is followed by an account of the invasion of occupied France and the Allies' advance to Germany's borders. A final section examines Japan's defeat and capitulation, and the creation of a new order in the Far East.

luftwaffe secret projects fighters 1939 1945: Arado Ar 234 A J. Richard Smith, Eddie J. Creek, 2006 The Arado Ar-234 was the first purpose-built jet bomber. Although the prototypes were completed largely by the end of 1941, delays in the supply of the engines meant that it was not until July 1943 that the type first flew. By the end of the war, more than 220 of the type had been constructed, although only a small proportion of these had actually entered service. The first of Midland Publishing's new 'Military Aircraft in Detail' series provides a detailed history of the development and operation of the Ar-234, supported by many photos, line drawings, and specially commissioned artworks. The camouflage schemes applied to the aircraft are also examined: many of the illustrations are previously unpublished, making the book an essential addition to the limited range of publications available on this important aircraft type. Aimed specifically at the aviation modeler and those interested in the history of the Luftwaffe, this first volume gets the new Military Aircraft in Detail series off to a good start and adds greatly to our knowledge of one of the most advanced aircraft which saw service during World War II.

luftwaffe secret projects fighters 1939 1945: Old Lessons New Thoughts... ,

luftwaffe secret projects fighters 1939 1945: Jet Prototypes of World War II Tony Buttler, 2019-09-19 While World War II raged, pioneering aircraft and engine designers were busy

developing the world's first practical jet-powered research aircraft to test and prove the new technology. This book examines the aircraft that paved the way for Germany's Me 262 and Britain's Meteor - the world's first jet fighters. Throughout the war, Germany, Italy and Britain engaged in top-secret jet programmes as they raced to develop the airpower of the future. Various experimental aircraft were trialled in order to achieve the goal of producing an effective engine and fighter that could harness the potential of the jet power. These included the German Heinkel He 178 research aircraft and Heinkel He 280 jet fighter prototype, the famed British E.28/39 research aircraft built by Gloster Aircraft as well as the stillborn E.5/42 fighter and E.1/44 Ace fighter prototype, and finally the remarkable Italian Caproni-Campini N.1/CC 2 research aircraft. Illustrated throughout with full-colour artwork and rare photographs, this fascinating study examines the fore-runners to the military jet age.

luftwaffe secret projects fighters 1939 1945: Sound Barrier Peter Caygill, 2006-10-30 As the speed of early aircraft gradually increased there eventually became an awareness during the 1940's, that strange things were occurring at around 500mph. Many later WW2 fighter aircraft were reported to become dangerously uncontrollable in high-speed power dives. Pilot's and aircraft designers were beginning to encounter the sound barrier. We now realize it to be a phenomenon that occurs when the speed of sound is reached and air compressibility demands additional power to break through it. Breaking the sound barrier became one of the biggest challenges to the world's aircraft designers and it took great courage and daring for the test-pilots of that era to find the way through this difficult obstacle. This is the story of how innovative design and pilots learned how to deal with supersonic flight. It records the many different experimental aircraft and tells of the experiences of those that flew them. Many pilots lost their lives during those dangerous flights but those who survived became legendary.

luftwaffe secret projects fighters 1939 1945: German Air-dropped Weapons to 1945 Wolfgang Fleischer, 2004 8 1/2 x 11, 390 b&w photos Aircraft armament is very much an under-published subject area in which there is a growing interest. This is particularly true of air-dropped ammunition. This subject involves more than just bombs, rockets and a range of other weapons also come into this category. Combine this subject area with the Luftwaffe in World War II and you will have a book which is of great interest to historians and modelers alike and will also be of some practical value for artificers and personnel dealing with weapons systems in today's air forces. This book traces the development of German air-dropped ammunition, from the crude, 'aeronautical artillery', of World War I to the advanced remote-control bombs of World War II. Major topics include demolition bombs, incendiary bombs, special dropped ammunition, sea-dropping ammunition and dropping containers. A comprehensive illustrated listing catalogues information on 100 different bombs, 22 canisters and 50 of the most important bomb fuses. This is an unusual and innovative aviation title which will appeal to a wide readership in many areas of the aviation hobby.

luftwaffe secret projects fighters 1939 1945: My Tank Is Fight! Zack Parsons, 2006 A detailed and witty examination of 20 real inventions from WWII that never saw the light of day. Each entry includes full technical details, a complete development history, in-depth analysis, one or more illustrations and an acerbic fictionalised account of the invention's success or failure on the battlefield. These are the strangest inventions of WWII - from a 1000 ton tank to an aircraft carrier made out of ice - and for many of them, the original illustrations within are the only surviving images of the inspired lunacy they represent.

luftwaffe secret projects fighters 1939 1945: British Secret Projects Tony Buttler, 2003 The design and development of British bombers since WWII is covered in depth. Utilizes recently declassified archives to reveal little-known facts about special bomber development projects. Covers the design backgrounds for the V-Bomber program, Canberra, Buccaneer, Avro 730, TSR.2, Harrier, Jaguar and Tornado. Contains many previously unpublished illustrations, plus specially commissioned artworks of prototypes in contemporary markings.

luftwaffe secret projects fighters 1939 1945: Flypast, 2008

luftwaffe secret projects fighters 1939 1945: Luftwaffe Secret Projects Dieter Herwig,

Heinz Rode, 2003 8= x 11 150 b&w photos 110 color illustrations The two previous volumes in this hugely popular series have covered Fighters 1939-1945 and Strategic Bombers 1935-1945. This new addition takes a close look at a varied range of aircraft types, principally described as ground-attack and special-purpose types, but which includes Kampferstvrer (multi-purpose combat aircraft), multi-purpose and fast bombers, explosive-carrying aircraft intended to attack other aircraft, air-to-air ramming vehicles, bomb-carrying gliders and towed fighters, and airborne weapons and special devices (rockets, cannons, flame-throwers, etc.) As in the first two volumes, the technical descriptions and histories of about 140 aircraft types are brought to life by many specially created full-color artworks, showing the projects, often in unit markings, as they might have appeared if they had come to fruition and/or if the war had continued beyond 1945. This series has proven indispensable for historians and notably for modelers, whose imaginations are fired up by these revelations.

luftwaffe secret projects fighters 1939 1945: Air Force journal of logistics: vol28_no2 , luftwaffe secret projects fighters 1939 1945: Air Force Journal of Logistics , 2004

luftwaffe secret projects fighters 1939 1945: *International Warbirds* John C. Fredriksen, 2001-08-01 In depth descriptions and photographs of the aircraft of 21 nations presented with a unique human dimension that goes behind the machines to the people involved. Invaluable for specialists, accessible to enthusiasts, *International Warbirds: An Illustrated Guide to World Military Aircraft, 1914-2000* puts the most legendary fighter aircraft of the 20th century developed outside the United States on vivid display. It offers 336 illustrated biographies of the most significant warplanes used in squadron service from World War I to the Balkan conflict, including numerous models from Great Britain, France, Russia, and Japan, as well as notable machines from Israel, Canada, China, India, Brazil, and other nations. Entries span the history and scope of military aircraft from bombers and fighters to transports, trainers, reconnaissance craft, sea planes, and helicopters, with each capsule history combining nuts-and-bolts technical data with the story of that model's evolution and use. Together, these portraits offer an exciting, well-researched tribute to visionary designers and builders as well as courageous pilots and crews across the globe, and tell a vivid tale of how air power became such a decisive factor in modern warfare.
