essential cell biology bruce alberts 5th edition: Assaulted Personhood Craig C. Malbon, 2020-12-14 In 21st century America, personhood is under daily assault, sometimes with dire consequences. Scientist, ethicist, and ordained minister Craig C. Malbon encourages the reader to consider such assaults on personhood endured by victims of abortion, ageism, Alzheimer's disease, drug addiction, mental and physical disabilities, gender, gender orientation, racism, sexual preference, identity politics, and our will-to-power over the "other." In exploring personhood status, Malbon poses difficult questions for us. Is personhood assigned as all-or-nothing, or is it a sliding scale based upon criteria arbitrarily aimed at our vulnerabilities? Does the voiceless embryo and fetus have advocates who can speak to the moral question of abortion? Is the personhood of an economically insecure pregnant woman degraded to the point where lack of access to early termination of pregnancy results in "coercive childbearing?" Does being a member of the LGBTQI+ community target one for assaults on personhood, to the extreme of being killed? In delving into the biology and psychology of assaults of "self" upon the "other," Malbon sees powerful linkages of everyday assaults on personhood to darker, profound "original sins" that are foundational to the rise of the American empire, i.e., assaults on the indigenous Native Americans and assaults derivative to the institution of slavery upon Africans, African Americans, and their descendants.

essential cell biology bruce alberts 5th edition: The Master Builder Dr. Alfonso Martinez Arias, 2023-08-01 An ingenious argument (Kirkus) for a novel thesis (Publishers Weekly) that cells, not DNA, hold the key to understanding life's past and present What defines who we are? For decades, the answer has seemed obvious: our genes, the "blueprint of life." In The Master Builder, biologist Alfonso Martinez Arias argues we've been missing the bigger picture. It's not our genes that define who we are, but our cells. While genes are important, nothing in our DNA explains why the heart is on the left side of the body, how many fingers we have, or even how our cells manage to

reproduce. Drawing on new research from his own lab and others, Martinez Arias reveals that we are composed of a thrillingly intricate, constantly moving symphony of cells. Both their long lineage—stretching back to the very first cell—and their intricate interactions within our bodies today make us who we are. Engaging and ambitious, *The Master Builder* will transform your understanding of our past, present, and future—as individuals and as a species.
