Among these applications, entertainment will differentiate ICT applications in the private and personal market from the office. Comprehensive research and development on ICT applications for entertainment will be different for the promotion of ICT use in the home and other places for leisure. So far engineering research and development on entertainment has never been really established in the academic communities. On the other hand entertainment-related industries such as the video and computer game industries have been growing rapidly in the last 10 years, and today the entertainment computing business outperforms the turnover of the movie industry. Entertainment robots are drawing the attention of young people. The event called RoboCup has been increasing the number of participants year by year. Entertainment technologies cover a broad range of products and services: movies, music, TV (including upcoming interactive TV), VCR, VoD (including music on demand), computer games, game consoles, video arcades, gambling machines, the Internet (e.g., chat rooms, board and card games, MUD), intelligent toys, edutainment, simulations, sport, theme parks, virtual reality, and upcoming service robots. miilo and the magical stones: People and Computers XVIII - Design for Life Sally Fincher, Panos Markopoulos, David Moore, Roy Ruddle, 2007-03-11 The eighteenth annual British HCI Conference chose as its theme Design for Life. 'Life' has many facets, from work (of course, or should we say inevitably!) to travel, fun and other forms of leisure. We selected 23 full papers out of 63 submitted, which covered our interaction with computer systems in a variety of types of life situation — including games, tourism and certain types of work — and also covered a variety of stages in our lives, from the young to the elderly. These papers were complemented by others that described more traditional aspects of research in the field of human-computer interaction. In putting together the programme we followed a three-stage process. First each paper was reviewed by at least three reviewers. Then a member of the committee conducted a meta-review. Finally, all sets of reviews were considered by the technical chairs who assembled a programme that was submitted to, and approved by, the full committee. This process was greatly assisted by the use of the Precision Conference Solutions web-based submission system. Even more important, of course, were the volunteer reviewers themselves. In recognition, this year we have made an award for the best reviewer as well as one for the best paper.

miilo and the magical stones: A Medieval Book of Magical Stones: The Peterborough Lapidary Francis Young, 2016 A Medieval Book of Magical Stones is the first translation of the longest and most comprehensive medieval English treatise on the occult powers of stones and gems, the Peterborough Lapidary. Lapidaries (encyclopaedias of the 'virtues' of stones and minerals) were an essential resource for practitioners of natural and ritual magic as well as medicine. This late fifteenth-century manuscript from the library of Peterborough Cathedral describes 145 stones, portraying them as living beings whose properties range from giving the bearer the power to command spirits and foretell the future to healing numerous illnesses and communicating with

Many of the proposed uses of stones resemble the concerns of medieval necromancers, such as invisibility, love magic, power over animals and the creation of magical mirrors. pp. xliii+106; 2 column text; introduction; bibliography; analytical index; 8 b/w illustrations
