german sarmiento, 2015-09-22 INSTRUCTIONS CHAIN MANAGEMENTThe Arduino language includes a complete set of instructions for handling and processing chains. With them you can search for strings within other, substitute one string for another, joining (concatenate) chains, know its length, etc. However, all these instructions pertain to a specific object of the language called String, which can not be used with a simple array of characters. So, to start using all these functions with one or more chains, the most common is to declare those chains type String (note the capital S) rather than as an array of characters. Ie write a statement like this: String aString = hello how about ;. You can also declareString individual character as well: String aCharacter = 'a'; Or a new String object initialized to the value of an existing one: String = objetostringyaexistente objetostringnuevo ;.

German Sarmiento, 2015-09-28 More fun to do is to use LEDs flashing all sensors to detect what is happening out there and react accordingly. Unfortunately, each sensor has its own methods of connection: some need resistance pull-up and some not, some need their own sources of power and some not, some work to much stress and not others, etc. In this chapter the most common sensors are presented with examples of circuits that are used and Arduino code that make them work. He also indicated for each specific type of sensor which specific products can be found in different distributors. However, if desired, can be purchased easily once a set of different sensors thanks to sensor pack 900 of Adafruit (code Product No. 176) or the Sensor Kit Sparkfun (product code11016). The first includes an infrared LED and a specific infrared remote sensor, a light sensor, a temperature sensor, a tilt sensor, shock sensor (usable as buzzer), magnetic field sensor (with a magnet), a force sensor and an accelerometer. The second includes a specific infrared remote sensor, a light sensor, a bending sensor, a sensor for shock and vibration, magnetic field sensor (along with a sensitive switch-what he called a reed switch -), a force sensor, a humidity sensor, a distance sensor, a motion sensor, an accelerometer, a gyroscope, a compass (magnetometer) and an atmospheric pressure sensor (barometer). It also includes a thin membrane potentiometer with linear path (product number 8680).
