

what should we eat in dieting

What Should We Eat in Dieting? A Guide to Smart, Healthy Choices

What should we eat in dieting is a question that many of us wrestle with when trying to adopt healthier habits or shed some unwanted pounds. The truth is, dieting isn't about starving yourself or eliminating entire food groups; it's about making smarter, balanced choices that nourish your body and support your goals. Understanding the types of foods that promote satiety, provide essential nutrients, and maintain energy levels is key to successful and sustainable dieting.

In this article, we'll explore the best foods to include in your diet, how to structure your meals for optimal results, and tips to help you stay on track without feeling deprived. Along the way, we'll touch on important concepts like macronutrients, portion control, and mindful eating—all crucial for anyone wondering what should we eat in dieting.

Understanding the Basics: What Should We Eat in Dieting?

Before diving into specific foods, it's important to clarify the fundamentals. Dieting isn't about quick fixes or fad trends; it's about creating a sustainable eating pattern that supports your health and weight goals. The right diet will vary from person to person, but the following principles generally hold true:

- Focus on whole, minimally processed foods.
- Balance your intake of macronutrients: proteins, carbohydrates, and fats.
- Prioritize fiber-rich foods to improve digestion and fullness.
- Stay hydrated and avoid empty calories like sugary drinks.

Why Whole Foods Matter

Whole foods—think fresh vegetables, fruits, whole grains, lean meats, nuts, and seeds—are packed with nutrients that your body needs to function optimally. Unlike processed foods that often contain added sugars, unhealthy fats, and artificial ingredients, whole foods provide vitamins, minerals, and antioxidants that support metabolism and overall well-being.

When considering what should we eat in dieting, incorporating a variety of whole foods ensures that you're not just cutting calories but actually nourishing your body.

Protein: The Building Block of a Satisfying Diet

One of the key components of a healthy diet, especially when aiming for weight loss or

maintenance, is protein. Protein plays a crucial role in muscle repair, hormone production, and immune function. Moreover, it helps you feel full longer, reducing the temptation to snack on unhealthy options.

Best Protein Sources for Dieting

Not all proteins are created equal. Lean and clean sources are preferable when dieting:

- **Chicken breast and turkey:** Low in fat and high in protein.
- **Fish and seafood:** Rich in omega-3 fatty acids, which support heart health.
- **Eggs:** A nutrient-dense option that's versatile and filling.
- **Legumes and beans:** Plant-based proteins that also provide fiber.
- **Greek yogurt and cottage cheese:** High in protein and can be a great snack or meal addition.

Incorporating these protein sources into your meals helps regulate blood sugar levels and keeps hunger at bay, which is essential for sticking to your diet plan.

Carbohydrates: Choosing the Right Kind for Dieting Success

Carbohydrates often get a bad rap in dieting circles, but they are an important energy source. The key is to choose complex carbs that digest slowly and provide sustained energy rather than simple sugars that cause spikes and crashes.

Complex Carbs to Include

Opt for whole grains, vegetables, and fruits rather than refined grains or sugary snacks:

- **Brown rice and quinoa:** High in fiber and nutrients.
- **Sweet potatoes:** A nutrient-dense carb loaded with vitamins.
- **Oats:** Great for breakfast and rich in soluble fiber.
- **Leafy greens and cruciferous vegetables:** Low in calories but high in fiber and vitamins.

- **Berries and apples:** Fruits with a low glycemic index that provide antioxidants.

Eating these types of carbohydrates supports digestion, promotes fullness, and sustains energy — all important when you're figuring out what should we eat in dieting.

Healthy Fats: Why They're Essential in Dieting

Contrary to popular belief, fats aren't the enemy. Healthy fats are necessary for hormone regulation, brain health, and absorbing fat-soluble vitamins. Including the right fats can also help reduce cravings and improve satiety.

Sources of Healthy Fats

Here are some fat sources that should be part of a balanced diet:

- **Avocados:** Packed with monounsaturated fats and fiber.
- **Nuts and seeds:** Almonds, walnuts, chia seeds, and flaxseeds are nutrient-rich.
- **Olive oil:** Ideal for cooking or dressings.
- **Fatty fish:** Salmon and mackerel provide omega-3 fatty acids.

Including these fats in moderation ensures your diet is well-rounded and keeps you feeling satisfied.

Fiber: The Unsung Hero of Weight Management

Fiber often gets overlooked when people ask what should we eat in dieting, but it's a powerful ally. It slows digestion, helps regulate blood sugar, and promotes a healthy gut microbiome.

How to Boost Fiber Intake

- Eat plenty of vegetables daily, focusing on leafy greens and fibrous options like broccoli and carrots.
- Incorporate whole grains instead of refined grains.
- Snack on fruits with edible skins, such as apples or pears.

- Include legumes and beans in your meals several times a week.

Fiber-rich foods not only help you feel full but also support digestion and reduce bloating, making them essential for a comfortable and effective diet experience.

Meal Timing and Portion Control

Knowing what to eat in dieting is just part of the puzzle. How and when you eat can influence your success as well.

Balanced Meals Throughout the Day

Try to spread your meals evenly and avoid long gaps that might lead to overeating later. Combining proteins, fats, and complex carbs in every meal helps maintain steady energy and curb cravings.

Mindful Portion Sizes

Even healthy foods can contribute to weight gain if eaten in excessive amounts. Using smaller plates, paying attention to hunger cues, and avoiding distractions like screens can help you control portions naturally.

Hydration and Its Role in Dieting

Often underestimated, water plays a vital role in dieting. Drinking enough fluids keeps your metabolism functioning well and can reduce feelings of hunger, which are sometimes mistaken for thirst.

Aim to drink at least 8 glasses of water daily, and consider herbal teas or infused water with lemon or cucumber as flavorful alternatives.

Foods to Limit or Avoid

While focusing on what should we eat in dieting, it's also important to recognize foods that might hinder progress:

- Highly processed snacks and fast food loaded with unhealthy fats and sugars.
- Sugary beverages like soda and many commercial fruit juices.

- Refined grains such as white bread and pastries.
- Excessive alcohol consumption, which adds empty calories.

Reducing these foods doesn't mean complete elimination but rather moderation and mindful choices.

Dieting is a journey that goes beyond just calorie counting. By focusing on nutrient-dense, satisfying foods like lean proteins, complex carbohydrates, healthy fats, and fiber-rich vegetables and fruits, you create a foundation for lasting health and wellness. Remember, the question of what should we eat in dieting is really about finding balance and enjoying the process of nourishing your body every day.

Frequently Asked Questions

What are the best foods to eat while dieting?

The best foods to eat while dieting are whole, nutrient-dense options such as vegetables, fruits, lean proteins (like chicken, fish, and tofu), whole grains, and healthy fats (like avocados, nuts, and olive oil). These foods help keep you full and provide essential nutrients.

Should I avoid carbohydrates completely when dieting?

No, you don't need to avoid carbohydrates completely. Focus on complex carbohydrates such as whole grains, legumes, and vegetables, which provide fiber and sustain energy. Avoid or limit refined carbs and sugary foods instead.

How important is protein intake during dieting?

Protein is very important during dieting as it helps preserve muscle mass, boosts metabolism, and promotes satiety. Including adequate protein from sources like lean meats, dairy, legumes, and plant-based proteins can support effective weight loss.

Can healthy fats be included in a diet plan?

Yes, healthy fats are essential and should be included in a dieting plan. Sources like olive oil, avocados, nuts, seeds, and fatty fish provide essential fatty acids that support overall health and help you feel full longer.

Is it beneficial to eat more fiber-rich foods when

dieting?

Yes, eating fiber-rich foods such as vegetables, fruits, whole grains, and legumes is beneficial during dieting. Fiber promotes digestive health, increases feelings of fullness, and can help control blood sugar levels.

How important is meal timing and portion control in dieting?

Meal timing and portion control can be important for some people to manage hunger and calorie intake. Eating smaller, balanced meals or snacks throughout the day can prevent overeating, but overall calorie quality and quantity remain the key factors for successful dieting.

What Should We Eat in Dieting: A Comprehensive Guide to Smart Nutritional Choices

What should we eat in dieting is a question that resonates widely among individuals aiming to lose weight, maintain health, or improve overall well-being. Despite the abundance of diet plans and nutritional advice, making informed food choices remains a nuanced challenge. Understanding the types of foods that support effective dieting involves dissecting macronutrient balance, caloric density, nutrient quality, and the role of satiety. This article explores these aspects critically, providing a professional review of what constitutes an optimal diet for weight management and health.

Understanding the Fundamentals of Dieting

Dieting, at its core, revolves around creating a sustainable calorie deficit or maintaining a balanced intake to meet specific health goals. However, the quality of calories consumed is as crucial as the quantity. Therefore, answering the question of what should we eat in dieting necessitates a focus not just on calorie counting but also on the nutritional profile of foods.

Macronutrients and Their Role

The three main macronutrients — carbohydrates, proteins, and fats — all play distinct roles in dieting.

- **Proteins:** Essential for muscle repair, satiety, and metabolic rate maintenance. Proteins have a higher thermic effect, meaning the body uses more energy to digest them compared to fats and carbs. Lean protein sources such as chicken breast, fish, legumes, and low-fat dairy are commonly recommended.

- **Carbohydrates:** Often misunderstood in dieting, carbohydrates are the body's primary energy source. Complex carbohydrates like whole grains, vegetables, and fruits provide fiber and micronutrients, aiding digestion and prolonging fullness.
- **Fats:** Integral for hormone production and cell health. Choosing unsaturated fats found in nuts, seeds, avocados, and olive oil is preferable over saturated and trans fats.

Balanced inclusion of these macronutrients fosters metabolic efficiency and prevents nutritional deficiencies during dieting.

Caloric Density and Satiety

Foods with low caloric density but high volume, such as vegetables and fruits, enable larger portion sizes without excessive calorie intake, promoting satiety and adherence to dieting protocols. Conversely, energy-dense foods rich in sugars and fats can lead to overeating due to lower satiety signals.

What Should We Eat in Dieting: Choosing Nutrient-Dense Foods

To optimize dieting outcomes, it is imperative to prioritize nutrient-dense foods that supply essential vitamins, minerals, and antioxidants alongside macronutrients.

Vegetables and Fruits

Vegetables and fruits are foundational in dieting strategies. They are rich in fiber, vitamins (such as vitamin C and folate), and phytochemicals that support metabolic health and immune function. For instance, leafy greens like spinach and kale provide minimal calories but high nutrient content, making them ideal for calorie-restricted diets.

Whole Grains versus Refined Grains

Whole grains retain bran and germ layers, offering more fiber and micronutrients compared to refined grains. Consuming whole oats, brown rice, quinoa, and barley has been linked to improved glycemic control and prolonged energy release, making them favorable in weight management.

Lean Proteins and Plant-Based Alternatives

Incorporating lean animal proteins such as turkey, fish, and eggs helps preserve lean muscle mass during dieting. Additionally, plant-based proteins like lentils, chickpeas, and tofu provide fiber and beneficial phytonutrients, aligning well with both weight loss and cardiovascular health goals.

Healthy Fats

Dietary fats should not be neglected; instead, focusing on sources rich in omega-3 and monounsaturated fats can support satiety and reduce inflammation. Fatty fish such as salmon and mackerel, along with nuts and seeds, are recommended in moderate amounts.

Foods to Limit or Avoid During Dieting

While focusing on what should we eat in dieting, it is equally important to identify foods that can hinder progress.

- **Added Sugars:** Found in sugary beverages, candies, and processed snacks, added sugars contribute to excess calories with minimal nutritional benefit and can disrupt blood sugar regulation.
- **Refined Carbohydrates:** White bread, pastries, and many processed cereals lack fiber and cause rapid spikes in blood glucose, potentially increasing hunger and calorie intake.
- **Trans Fats:** Often present in fried foods and some packaged snacks, trans fats can negatively impact heart health and should be avoided.

Moderation and mindful consumption are key, as completely eliminating certain food groups may not be sustainable long-term.

The Role of Hydration and Beverages

Adequate hydration supports metabolic function and can assist in appetite regulation. Water should be the primary beverage choice, while sugary drinks and excessive alcohol intake are best minimized due to their empty calorie content.

Practical Tips for Implementing Healthy Eating in Dieting

Understanding theoretical nutritional principles is necessary but translating them into practical habits is crucial for success in dieting.

Meal Planning and Portion Control

Planning meals ahead helps avoid impulsive eating of calorie-dense, nutrient-poor foods. Portion control using tools like measuring cups or visual cues ensures energy intake aligns with dieting goals.

Mindful Eating Practices

Slowing down while eating and focusing on hunger cues can prevent overeating. This practice aligns with choosing foods that promote fullness, such as those rich in fiber and protein.

Incorporating Variety

A diverse diet not only prevents nutrient deficiencies but also sustains interest and enjoyment, reducing the risk of diet fatigue.

Scientific Insights on Dieting Food Choices

Recent studies emphasize the importance of dietary quality over sheer calorie restriction. For example, research published in the Journal of the American Medical Association (JAMA) highlights that diets high in whole foods and low in processed items correlate with improved weight loss and metabolic markers.

Moreover, the Mediterranean diet, characterized by abundant vegetables, fruits, whole grains, lean proteins, and healthy fats, consistently ranks as one of the healthiest dietary patterns for weight management and cardiovascular health.

Comparative Analysis of Popular Diets

When evaluating popular dieting approaches, the common denominator remains a focus on whole, minimally processed foods:

1. **Low-Carb Diets:** Prioritize proteins and fats, reducing carbohydrates, often resulting in rapid initial weight loss but requiring attention to nutrient balance.
2. **Plant-Based Diets:** Emphasize fruits, vegetables, legumes, and whole grains, offering fiber and antioxidants but needing mindful protein sourcing.
3. **Intermittent Fasting:** Focuses on timing rather than food type, but the quality of consumed foods remains vital for sustainable results.

This analysis underscores that irrespective of the dieting model, the question of what should we eat in dieting hinges on nutrient density, balance, and sustainability.

Dieting is a complex interplay of caloric management and nutritional adequacy. Selecting foods that are rich in protein, fiber, vitamins, and healthy fats while limiting processed, sugary, and high-fat items supports effective and healthful weight management. Adopting a flexible yet informed approach to eating encourages adherence and long-term success, making the answer to what should we eat in dieting both straightforward and personalized.

what should we eat in dieting: What Should We Eat? Roman Espejo, 2016-02-03 Gluten, red meat, fish, insects, all things we do or don't eat, but could. Should we? This book explores how best to sustain ourselves, from organic food to fast food. Readers are treated to both sides of current dietary views on how humans should be eating for health and longevity.

what should we eat in dieting: How many Calories should we eat? David Broward, About 150 years ago, the engineers and physicists used the calorie to measure the amount of energy required to heat one kilogram of water one degree Celsius. Trying to determine the energy consumption of the human body, scientists burned in the calorimeter various substances (including food, drinks, and excrements) and measured the difference in water temperature. This is how we ended up with 9 Calories per gram for fat and 4 Calories per gram for protein and carbohydrates. That's why water is the only substance that has Zero Calories, and this is how the calorie found its niche in nutrition. Yet, have you ever wondered... Why the Calorie is supposed to be capitalized when referring to the energetic value of foods and drinks? Why there are 2,000 Calories per day used for general nutrition advice (and not 1,500, 2,400, 2,700, or any other value)? What the claims found on the food labels actually mean? Which carbs are good, which ones are bad, and why we witness a global epidemics of overweight, obesity, and diabetes? What's the difference between saturated and unsaturated (mono- poly-, trans-, and interesterified) fat? Is there such a thing as a perfect diet? Why in the countries that have adopted the Metric System the energy is expressed in kilojoules and not in Calories? How much energy (whether expressed in kilocalories or kilojoules) a person needs a day? This book proposes to find an answer to the above questions (and many others)

by connecting the information from various fields of science, including Physics, Chemistry, Biology, and Thermodynamics.

what should we eat in dieting: The Ancestors Diet Case Adams, 2024-01-06 The Ancestors Diet settles the debate regarding the foods the earliest humans ate and what our bodies were designed to eat with scientific rigor and practical wisdom, drawing from evidence from over two thousand studies and research papers. The evidence illustrates the diet humans were genetically and metabolically designed to eat also happens to be the healthiest, most delicious and colorful diet, along with being one of the least restrictive diets. This diet also happens to be the best diet for our gut microbiome, and the easiest way to lose weight and keep the weight off. Included in the book are the surprising answers to gluten sensitivity, dairy and other controversial food topics. The Ancestors Diet is the diet scientifically proven to extend life and reduce the incidence of numerous conditions including heart disease, diabetes, arthritis, asthma, dementia, digestive disorders, liver diseases and strokes, only to list a few. What else would we expect from the diet our bodies were biologically designed to eat?

what should we eat in dieting: NO MORE DIETS (A Guide to Healthy Eating) Anne Rogers, 2008-08-20 No More Diets (A Guide To Healthy Eating). If you could improve any aspect of your health today, what would you choose? Would you want to be at your ideal weight? Feel and look younger? Avoid premature aging? Reduce or eliminate some diseases or illness? Not feel tired all the time, increase your energy? Anne Rogers is a retired registered nurse and qualified nutritionist. She spent 10 years researching this book. She was very overweight, 18 stone while nursing and was desperate to lose weight. Anne tried lots of diets, which failed. She decided to research and write this book after qualifying as a nutritionist; she lost weight by putting the advice in the book into practice. Anne now weighs 10.5 stone and feels better. She does not diet and eats as much of the right kind of food as she wants, and enjoys her food and her new found health. Many people have benefited from this book and have improved their health.

what should we eat in dieting: Diets for Healthy Healing Linda Page, 2005-04 Dr. Linda Page, author of the best selling book, Healthy Healing, A Guide to Self-Healing for Everyone 12th edition, now brings us her long awaited new book, Diets for Healthy Healing. what should we eat in dieting: Mediterranean Diets A. P. Simopoulos, F. Visioli, Berthold Koletzko, 2000-07 Contrary to popular belief, there is no such thing as one Mediterranean diet: This geographic region includes several nations with varied cultures, traditions, incomes and dietary habits, resulting in a wide variation of dietary patterns. The present volume focuses on the latest research data from basic science and clinical intervention studies that indicate that a balanced ratio of omega-6 and omega-3 fatty acids and a high antioxidant intake from fruits and vegetables, along with olive oil, contribute to a lower rate of heart disease and increased longevity. These benefits are especially pronounced in the population of Crete, indicating that this diet is particularly healthy. Moreover, descriptions of the diets of Greece, Italy, Spain and the Maghreb are given for the first time, pointing to their differences as well as to their common dietary patterns; these are followed by chapters on the nutritional and metabolic contributions of antioxidants, wine, olive oil and fatty acids. Results from the Lyon Heart Study lead to the conclusion that plasma and cell membrane phospholipid omega-6 and omega-3 fatty acid ratios are among the main biological effects of the experimental modified diet of Crete tested in this trial. Results also show that a pattern based on a modified diet of Crete decreases the death rate of both coronary heart disease and cancer. Physicians, nutritionists, cardiologists, cancer specialists, food scientists, agriculturists, dietitians as well as the informed public will find this volume of particular interest.

what should we eat in dieting: *The Diet* Brady Barrows, 2003-08-10 This diet works within thirty days and you will prove it to yourself. For more information go to www.the-diet-book.com

what should we eat in dieting: Skinny Chicks Don't Eat Salads Christine Avanti, 2010-03-30 A sports nutritionist for Hollywood clients explains why typical health foods do not necessarily promote weight loss, reveals foods that stabilize blood sugar for a variety of potential health benefits, and cites the importance of avoiding deprivation diets.

what should we eat in dieting: Easy Breadmaking for Special Diets, Third Edition Nicolette M. Dumke, 2011-10 Has a gluten-free, food allergy, or other special diet made you give up your favorite breads, snacks, and desserts? Now you can have them again and make them quickly and easily by using a bread machine or other appliances. Easy Breadmaking for Special Diets contains over 235 recipes for allergy, gluten-free, heart healthy, low fat, low sodium, yeast-free, diabetic, and controlled carbohydrate weight loss diets. Put zest back in your diet - and life - with recipes for your favorite foods, complete with nutritional analyses and diabetic exchanges. Imagine having breads of all kinds including sweet breads and sourdough, rolls and buns, coffee cakes, cinnamon rolls, heart-healthy baked doughnuts, sweet treats of many other kinds (all sweetened without sugar), and main dishes such as pizza and Mexican foods. Use your bread machine, food processor, mixer, or

tortilla maker to make the bread YOU need quickly and easily.

what should we eat in dieting: The Professionals' Guide to Diet, Nutrition and Healthy Eating ,

what should we eat in dieting: *LIVING WELL: SIX PILLARS FOR LIVING YOUR BEST LIFE - SECOND EDITION* Greg Horn, 2020-11-18 Living Well is a book for anyone who wants to get the most out of life, with clear answers about health, diet, exercise, and personal habits that can make all the difference. Living Well is the only program that incorporates all the elements of good health into one whole life plan by using Six Pillars: Thinking Well, Eating Well, Moving Well, Sleeping Well, Hosting Well, and Staying Well. Written by health and nutrition expert Greg Horn in the same engaging and accessible style that made Living Green a best seller, Living Well connects the science to the art of Living Well, consolidating the latest scientific research into common sense insights and offering a prescriptive action plan that readers can incorporate into their lives. What's more important than Living Well? We only get one life to live. How can we make it our best? Greg Horn is a leading innovator in healthy and sustainable business, with two decades of experience in developing and managing companies associated with personal health, nutrition, and environmental sustainability. Greg is CEO of Specialty Nutrition Group, Inc., a development firm focused on commercializing nutrition innovation. He is former CEO of both Garden of Life, currently the top brand in the natural channel, and General Nutrition Centers (GNC), the world's largest specialty retailer of nutrition products. He was chairman of Royal Numico's North American Executive Committee, which oversaw the company's \$2.5 billion specialty retail, mass market, and direct selling operations in North America. He has co-founded several branded nutrition and healthy living companies and Nutrition Capital Network. Greg is author of the best-seller Living Green and co-founder of Eco Shoppe. Greg holds an MBA from UCLA and a BA (summa cum laude, Phi Beta Kappa) from the University of Redlands.

what should we eat in dieting: *Journal of the United States Artillery* , 1934

what should we eat in dieting: *Sustainable Diets* Barbara Burlingame, Sandro Dernini, 2018-12-10 This book takes a transdisciplinary approach and considers multisectoral actions, integrating health, agriculture, environment, economy, and socio-cultural issues, to comprehensively explore the topic of sustainable diets. Consideration is given to the multi-dimensional nature of diets and food systems, and the book explores the challenging issues connecting food security and nutrition to sustainability, culture, tradition, and a broader range of scientific topics. The first section, 'Grand Challenges' (chapters 1-9), positions sustainable diets in the multi-perspective context of food systems. Within the current international debate, it introduces some overarching wicked problems, resistant to resolution in spite of the dire consequences of inaction. The chapters cover multi-sectoral policy, public health, sustainable food systems, climate change, biodiversity loss, agro-ecology, indigenous peoples, the role of cities, and food and waste. The contributions in the second section, 'Qualitative and Quantitative Approaches' (chapters 10-17) discuss the topic of sustainable diets from different cultural, sectoral and disciplinary angles. The issues are analysed with data and methods derived from social sciences, clinical sciences and experimental sciences. Perspectives and solutions, with evidence, are presented to underpin policies and interventions. The last section, 'Moving Forward' (chapters 18-29) deals with selected innovations, initiatives, projects, case studies and programmes enhancing sustainable diets by linking nutrition to food systems.

what should we eat in dieting: *The Great American Detox Diet* Alex Jamieson, 2005-06-15 A vegan chef and holistic nutritionist offers a comprehensive and effective detox program designed to help individuals improve their eating habits, lose weight, overcome sugar addictions, improve chronic ailments, increase energy, eliminate allergies, and promote long-term health benefits. 40,000 first printing.

what should we eat in dieting: *UCSF Magazine* , 1978

what should we eat in dieting: *The Dietitian's Guide to Vegetarian Diets: Issues and Applications* Reed Mangels, Virginia Messina, Mark Messina, 2021-10-01 The Dietitian's Guide to Vegetarian Diets: Issues and Applications, Fourth Edition provides the most up-to-date information

on vegetarian diets. Evidence-based and thoroughly referenced, this text includes case-studies, sample menus, and counseling points to help readers apply material to the real world. Written for dietitians, nutritionists, and other health care professionals, the Fourth Edition can be used as an aid for counseling vegetarian clients and those interested in becoming vegetarians, or serve as a textbook for students who have completed introductory coursework in nutrition.

what should we eat in dieting: Food, Nutrition, and Diets at Net Zero. 10 years of Frontiers in Nutrition Johannes le Coutre, 2025-05-23 Over the second half of the 20th century, many questions relating to food and nutrition science were considered to be nearly “understood”, and beyond ensuring the balanced delivery of proteins, carbohydrates, and fats, no major discoveries were anticipated in this scientific field. Much of the technological advancements in the field were focused on food production and procurement at scale. Now, about half a century later, the domain of food and nutrition science technology is experiencing a renaissance unlike any other. We are not only discussing food and public health using narratives ranging from functional to superfoods, but we are also engaging in conversations about planetary health and the role of foods as medicine, among other topics. Furthermore, we are beginning to realize the intricate interplay between food systems and our global climate. Our methods of procuring nutrition contribute to climate change, and we are witnessing a significant increase in climate-driven events that threaten our food security. Ten years ago, in collaboration with the team at Frontiers, we founded Frontiers in Nutrition to provide a rigorous, science-based platform for the open-access publication and exchange of findings within a fully integrated scope of discussing food and nutrition. With this Research Topic, we welcome the world's foremost influential and leading scientists to join us in celebrating our 10th anniversary and to contribute bold and visionary articles.
