extreme math google drive: Wasted Education John D. Skrentny, 2023-11-17 An urgent reality check for America's blinkered fixation on STEM education. We live in an era of STEM obsession. Not only do tech companies dominate American enterprise and economic growth while complaining of STEM shortages, but we also need scientific solutions to impending crises. As a society, we have poured enormous resources—including billions of dollars—into cultivating young minds for well-paid STEM careers. Yet despite it all, we are facing a worker exodus, with as many as 70% of STEM graduates opting out of STEM work. Sociologist John D. Skrentny investigates why, and the answer, he shows, is simple: the failure of STEM jobs. Wasted Education reveals how STEM work drives away bright graduates as a result of "burn and churn" management practices, lack of job security, constant training for a neverending stream of new—and often socially harmful—technologies, and the exclusion of women, people of color, and older workers. Wasted Education shows that if we have any hope of improving the return on our STEM education investments, we have to change the way we're treating the workers on whom our future depends.

extreme math google drive: *Saving Ourselves from Big Car* David Obst, 2025-09-16 Cars are killing people and making the planet uninhabitable. Crashes take the lives of more than a million people around the world each year. Air pollution linked to motor vehicles contributes to even more untimely deaths. Highways and unsafe streets have devastated cities, yet traffic congestion still swallows up countless hours. And carbon emissions from transportation are a key driver of climate change, which now threatens to make the world unlivable. Why do we still worship at the altar of the car? How can we find alternatives that are healthier for the planet and ourselves? This book exposes how “Big Car”—the complex of companies in the automobile, oil, insurance, media, and concrete industries that promote and entrench car dependence—has pursued profit at the expense of the common good. David Obst explores how Big Car gained almost immeasurable influence over our lives, weighing the benefits and the costs of reliance on private automobiles. He details how industry covered up the harms of lead additives, fought against seatbelts, and continues to fund climate-change denialism. Obst considers the future of mobility, surveying how cities—from Taipei to Tempe, Copenhagen to Chicago—are experimenting with forms of transportation that offer alternatives to the dominance of cars. Provocative and comprehensive, *Saving Ourselves from Big Car* is a powerful wake-up call for us to change how we use cars before it's too late.

Lean Brain Management strives toward uncompromising Lean Brain Quality. Lean Brain stands for consistent economization of intelligence in all realms of life: Intelligent systems will only be operated by unskilled workers. Education, universities, and schools would become obsolete. A week of training would be enough for virtually any job. (You are now the physician for the measles in the State of Ohio. In response to phone calls, send this prescription.) Lean Brain is not aimed at dumbing down! Lean Brain can survive on just a very small amount of central intelligence. Potential savings amount to trillions! This is demonstrated using Germany as an example. With this book, Dueck presents a radical suggestion for world improvement. The desire to laugh infinitely about it will eventually segue into a collective rude awakening. The book contains concrete advice for managers to economize on intelligence, and is thus—in keeping with the theme—written in an easy-to-read fashion. It contains no self-doubt whatsoever. When Midwestern journalist Steve Boman applied to the University of Southern California's vaunted School of Cinematic Arts, the world's oldest and most prestigious film school, he had more than a few strikes against him: His wife was recovering from thyroid cancer. His beloved sister had just died of leukemia. He lost his job. He had three young children. He was in his late 30s.... And he had no experience in filmmaking. As Boman navigates his way through USC's arduous three-year graduate production program, he finds that his films fall flat, he's threatened with being kicked out of the program and he becomes the old guy no one wants to work with. Defeated, he quits and moves back to the Midwest to be with his family. After he is urged by his wife to reapply, he miraculously gets in for a second time...only to have a stroke on the first day of classes. But instead of doing the easy thing - running away again -- Boman throws caution to the wind and embraces the challenge. He slowly becomes a gray-haired Golden Boy at USC with films that sparkle. And then he does the impossible: While still in school, for a class project, he dreams up a television series that CBS catches wind of and develops into THREE RIVERS, a primetime Sunday night show. This story of challenge and triumph—and what it takes to make it in the world's most famous film school—is a must-read for anyone aspiring to become a Hollywood great or anyone just looking for a good story.
