Geoffrey Miller *The Mating Mind: Exploring the Evolution of Human Creativity and Sexual Selection*

geoffrey miller the mating mind is a fascinating topic that delves into how human intelligence, creativity, and culture may have evolved not just for survival but as a product of sexual selection. Geoffrey Miller, an evolutionary psychologist, offers a compelling argument in his groundbreaking book **The Mating Mind**, where he suggests that many of our most distinctive human traits—such as art, humor, language, and intelligence—developed as mental fitness indicators to attract mates. This idea reshapes how we understand human evolution, highlighting the role of mate choice as a powerful force shaping our minds.

The Core Thesis of Geoffrey Miller's *The Mating Mind*

At its heart, Geoffrey Miller's **The Mating Mind** puts forward the concept that human cognitive abilities didn't just evolve because they helped us survive environmental challenges. Instead, they evolved significantly because they helped individuals display their genetic quality to potential mates. In other words, traits like wit, creativity, storytelling, and even moral virtues acted as signals of fitness—much like a peacock's tail signals health and vitality.

This idea is rooted in the theory of sexual selection, first proposed by Charles Darwin, which explains how certain traits evolve because they improve an organism's chances of reproducing rather than surviving. Miller builds on this by showing how the complex human mind functions as a kind of "courtship display," where intelligence and creativity serve as attractive qualities that potential partners look for.

Human Intelligence as a Fitness Indicator

Miller argues that intelligence is a form of costly signaling. Just as a peacock's extravagant tail requires energy to grow and maintain, displaying intelligence requires a significant investment of time and resources. Being smart, funny, or artistically talented is not just useful for problem-solving—it also broadcasts an individual's genetic quality, creativity, and overall health.

This perspective helps explain why humans have developed such unique cognitive abilities compared to other animals. Our minds are not just survival machines; they are also tools for impressing others in a social and

reproductive context. Intelligence, language skills, and humor become ways to outcompete rivals and attract high-quality mates.

The Role of Creativity in Human Evolution According to Geoffrey Miller

Creativity is a central theme in **The Mating Mind**. Miller suggests that artistic expression—whether through music, painting, storytelling, or dance—is a way to signal intelligence and emotional sensitivity. These creative behaviors are costly to produce and require a complex brain, making them reliable indicators of fitness.

Art and Music as Sexual Displays

One of the most intriguing insights from Miller's work is the idea that art and music evolved primarily for sexual selection. Unlike simple survival tools, these forms of expression don't have an immediate practical use, but they do play a significant role in attracting mates. The ability to create beautiful music or compelling stories demonstrates cognitive prowess and emotional depth, qualities that are appealing in a mate.

Anthropological evidence supports this view: early humans invested a lot of time and effort in producing art and music, often in social settings where potential mates were present. This suggests that these behaviors functioned as mating rituals as much as cultural practices.

Language and Humor as Mating Signals

Language and humor are other crucial elements Miller highlights. The ability to use language creatively and make others laugh requires quick thinking and social intelligence, signaling a well-developed mind. Through witty banter or storytelling, individuals can showcase their mental agility, making themselves more attractive partners.

Humor, in particular, is a fascinating trait because it involves understanding others' perspectives, timing, and emotional sensitivity. It's no surprise that studies often find humor to be one of the most valued qualities in romantic partners.

Implications of The Mating Mind on Modern

Relationships

Understanding Geoffrey Miller's ideas can offer fresh perspectives on how we approach relationships and attraction today. If intelligence and creativity evolved as sexual signals, this suggests that qualities like humor, originality, and verbal skill continue to play a vital role in human mating behavior.

Why Intelligence and Creativity Matter in Dating

In the modern dating scene, the traits Miller describes are still highly valued. People often seek partners who are not only physically attractive but also mentally stimulating. Conversations that showcase wit, cultural knowledge, and creativity can spark attraction and foster deeper connections.

This aligns with the idea that mate choice is not just about physical appearance but also about finding someone who signals good genes and compatibility through their cognitive and emotional abilities.

Practical Tips Inspired by The Mating Mind

Drawing from Miller's theory, here are some practical insights for those looking to enhance their attractiveness through mental displays:

- **Develop your creativity:** Engage in artistic pursuits like writing, music, or painting to showcase your unique talents.
- **Practice humor:** Cultivate your wit by learning to tell stories, jokes, or humorous anecdotes.
- **Improve communication skills:** Enhance your ability to express yourself clearly and creatively in conversations.
- **Engage in intellectually stimulating activities:** Read widely, learn new things, and stay curious to keep your mind sharp.

These behaviors not only make you more attractive but also enrich your own life, making the process of self-improvement rewarding beyond the realm of dating.

Critiques and Further Exploration of Geoffrey Miller's Mating Mind

While *The Mating Mind* has been praised for its innovative approach, it has also sparked debate within evolutionary psychology and related fields. Some critics argue that Miller's focus on sexual selection underestimates other evolutionary pressures shaping the human mind, such as cooperation, social learning, and ecological challenges.

Others question whether all human creativity can be explained by mate attraction, pointing out that cultural and environmental factors also play significant roles. Nevertheless, Miller's work remains a foundational contribution that encourages deeper examination of how our mental traits evolved.

Integrating Sexual Selection with Other Evolutionary Theories

Many researchers now view sexual selection as one of multiple forces that influenced human cognitive evolution. The mating mind hypothesis can be integrated with theories about social cooperation, tool use, and language development to create a more comprehensive understanding.

This interdisciplinary approach helps explain the complex interplay between survival needs and reproductive strategies in shaping human behavior and culture.

The Lasting Impact of Geoffrey Miller's The Mating Mind

Decades after its publication, Geoffrey Miller's *The Mating Mind* continues to inspire scholars and curious readers alike. It challenges us to rethink intelligence and creativity not just as tools for survival but as elaborate signals designed by evolutionary pressures related to mate choice. This perspective deepens our appreciation for the human mind's complexity and the subtle ways in which attraction influences who we are.

Whether you're interested in psychology, anthropology, or simply curious about human nature, exploring Miller's ideas offers valuable insights into the evolutionary roots of our behaviors, talents, and social interactions. The mating mind is not just a scientific concept—it's a window into the intricate dance between biology, culture, and love.

Frequently Asked Questions

Who is Geoffrey Miller and what is his book 'The Mating Mind' about?

Geoffrey Miller is an evolutionary psychologist known for his work on sexual selection. His book 'The Mating Mind' explores how human intelligence and creativity evolved primarily through mate choice and sexual selection.

What is the main thesis of 'The Mating Mind' by Geoffrey Miller?

The main thesis is that many human cognitive traits, like intelligence, art, language, and creativity, evolved as fitness indicators to attract mates, similar to the peacock's tail.

How does 'The Mating Mind' explain human intelligence differently from traditional views?

Unlike traditional views that emphasize survival advantages, 'The Mating Mind' argues that human intelligence evolved largely because it helped individuals attract and compete for mates through displays of creativity and wit.

What role does sexual selection play in Geoffrey Miller's 'The Mating Mind'?

Sexual selection is central to the book, as it posits that many human mental traits evolved as signals to potential mates, shaping our cognitive abilities through mate choice pressures.

Can you give examples of human behaviors discussed in 'The Mating Mind' that evolved due to sexual selection?

Behaviors such as storytelling, artistic expression, humor, and even language are presented as evolved traits that serve as fitness indicators to attract mates.

What evidence does Geoffrey Miller use to support his ideas in 'The Mating Mind'?

Miller draws on comparative studies of animal sexual selection, human psychology experiments, evolutionary biology, and anthropology to argue that cognitive traits function as fitness signals.

How has 'The Mating Mind' influenced the field of evolutionary psychology?

'The Mating Mind' has been influential in highlighting the importance of sexual selection in human cognitive evolution, inspiring further research on mate choice and signaling theory.

Does 'The Mating Mind' discuss the implications of sexual selection on modern human behavior?

Yes, the book discusses how sexual selection continues to influence human behavior, including mating strategies, social interactions, and even consumer preferences.

What criticisms have been raised against the ideas presented in 'The Mating Mind'?

Critics argue that Miller's sexual selection emphasis may overlook other evolutionary pressures on intelligence, and that some claims about cognitive traits as fitness indicators are difficult to empirically test.

Where can one read or learn more about Geoffrey Miller's 'The Mating Mind'?

'The Mating Mind' is available in bookstores and online retailers; additional resources include academic reviews, interviews with Geoffrey Miller, and lectures available on educational platforms.

Geoffrey Miller *The Mating Mind: An In-Depth Exploration of Human Sexual Selection and Evolution*

geoffrey miller the mating mind is a seminal work that has significantly influenced contemporary understanding of human evolution, particularly in relation to sexual selection and cognitive development. Published in 2000, Miller's book delves into the provocative theory that many aspects of human intelligence, creativity, and behavior have been shaped primarily by mate choice rather than survival needs alone. By integrating insights from evolutionary biology, psychology, and anthropology, Geoffrey Miller presents a compelling argument that the human mind itself is a product of sexual selection, much like the extravagant plumage of peacocks or the elaborate songs of birds.

This article offers an analytical review of Geoffrey Miller's contributions through "The Mating Mind," examining its core hypotheses, supporting evidence, and implications for the study of human nature. It also situates

the book within the broader discourse on sexual selection, cognitive evolution, and cultural anthropology, highlighting both its strengths and the critiques it has inspired.

Understanding Geoffrey Miller's Central Thesis

At the heart of Geoffrey Miller's "The Mating Mind" lies the proposition that sexual selection—a process first theorized by Charles Darwin—has profoundly influenced the development of human intelligence and creativity. Unlike natural selection, which prioritizes traits that enhance survival, sexual selection favors characteristics that improve an individual's chances of attracting a mate and reproducing. Miller argues that human cognitive abilities—ranging from language and art to humor and morality—serve as fitness indicators, analogous to a male peacock's tail, signaling genetic quality and desirability.

This paradigm shifts the traditional view of cognitive evolution by suggesting that the human brain evolved not only to solve practical problems but also to impress potential mates. The theory posits that many mental faculties are costly signals: they require significant energy and resources to develop and maintain, thereby reliably indicating the individual's underlying genetic fitness.

Sexual Selection Versus Natural Selection in Cognitive Evolution

Miller's distinction between sexual and natural selection is critical in understanding his argument. Natural selection focuses on traits that improve survival—such as the ability to find food or avoid predators—while sexual selection emphasizes traits that improve reproductive success. Miller contends that the human brain's remarkable complexity cannot be fully explained by natural selection alone, as intelligence and creativity often do not have direct survival benefits.

For instance, humans invest considerable time and energy in creating art, music, and storytelling—activities that do not necessarily enhance survival but may increase social status and attractiveness. Miller suggests these displays function as "fitness indicators," which potential mates use to assess genetic quality. This idea resonates with the handicap principle, which argues that costly traits serve as honest signals of fitness because only individuals with superior genes can afford them.

Features and Evidence Supporting The Mating

Mind

Geoffrey Miller's book draws on a multidisciplinary array of evidence to support his theory, including anthropology, psychology experiments, and comparative biology. Some key features and supporting arguments include:

- **Comparative Animal Behavior:** Miller references examples from the animal kingdom, such as bowerbirds and peacocks, whose elaborate displays function as sexual signals. He posits that humans are unique in using complex cognitive and cultural traits for similar purposes.
- **Human Creativity as a Mating Display:** The book examines how artistic expressions—music, poetry, storytelling—can serve as indicators of intelligence and creativity, traits desirable to mates.
- **Psychological Studies:** Miller cites research showing that individuals often find humor, intelligence, and creativity attractive, supporting the idea that these traits have evolved through sexual selection.
- **Neurological Costs:** The brain is metabolically expensive, consuming about 20% of the body's energy. Miller argues that this costliness itself makes cognitive traits reliable signals of genetic fitness.

By weaving together these strands of evidence, Miller builds a coherent narrative that human mental capacities are not merely survival tools but evolved mechanisms for sexual signaling.

Implications for Human Behavior and Culture

One of the most fascinating aspects of "The Mating Mind" is its exploration of how sexual selection shapes not only individual traits but also broader cultural phenomena. Miller suggests that cultural artifacts—such as art, literature, and even fashion—serve as vehicles for sexual signaling. This perspective offers fresh insights into the origins and functions of culture, framing it as an extended phenotype of sexual selection.

Moreover, Miller's theory provides a lens to understand certain human social behaviors, including competition for status, courtship rituals, and the development of language. For example, humor and wit can be seen as displays of intelligence that attract mates, while moral virtues may signal reliability and cooperative potential.

Critiques and Counterarguments

While Geoffrey Miller's "The Mating Mind" has been influential, it has also faced criticism from some scholars. Critics argue that the book may overemphasize sexual selection at the expense of other evolutionary factors. Some contend that cognitive traits likely evolved through a complex interplay of natural selection, social cooperation, and environmental pressures, not sexual selection alone.

Others point out that the evidence for many of Miller's claims remains circumstantial or correlational rather than causal. For instance, while creativity is attractive, it is difficult to disentangle whether it evolved primarily as a mating signal or also because of its practical survival benefits.

Finally, some anthropologists caution against overly simplistic analogies between human culture and animal mating displays, emphasizing the unique complexity of human societies and the multifaceted functions of culture.

Comparisons to Other Theories of Cognitive Evolution

Geoffrey Miller's theory can be contrasted with other prominent models of cognitive evolution:

1. **Social Brain Hypothesis:** Proposes that human intelligence evolved primarily to manage complex social relationships rather than sexual signaling.
2. **Ecological Intelligence Hypothesis:** Emphasizes problem-solving skills related to foraging and environmental challenges as drivers of brain evolution.
3. **Dual Inheritance Theory:** Focuses on gene-culture coevolution, suggesting culture and biology evolved interactively.

While Miller's sexual selection framework does not exclude these models, it highlights an often underappreciated dimension of cognitive evolution that complements rather than contradicts other perspectives.

The Legacy of Geoffrey Miller The Mating Mind

More than two decades after its publication, "The Mating Mind" continues to provoke debate and inspire research across multiple disciplines. Geoffrey

Miller's work has helped popularize the idea that human cognition and culture are deeply intertwined with sexual selection processes. This has influenced fields as diverse as evolutionary psychology, behavioral economics, and even marketing.

By framing intelligence and creativity as mating displays, Miller challenges researchers to reconsider the adaptive significance of human mental traits. His book remains a critical reference point for anyone interested in the evolutionary origins of human behavior, the role of sexual selection, and the nature of human creativity.

As ongoing research unravels the complexities of brain evolution and human mating strategies, Geoffrey Miller's "The Mating Mind" stands as a pioneering contribution that enriches our understanding of what it means to be human.

geoffrey miller the mating mind: On Our Minds Eric M. Gander, 2004-12-01 There is no question more fundamental to human existence than that posed by the nature-versus-nurture debate. For much of the past century, it was widely believed that there was no essential human nature and that people could be educated or socialized to thrive in almost any imaginable culture. Today, that orthodoxy is being directly and forcefully challenged by a new science of the mind: evolutionary psychology. Like the theory of evolution itself, the implications of evolutionary psychology are provocative and unsettling. Rather than viewing the human mind as a mysterious black box or a blank slate, evolutionary psychologists see it as a physical organ that has evolved to process certain types of information in certain ways that enables us to thrive only in certain types of cultures. In *On Our Minds*, Eric M. Gander examines all sides of the public debate between evolutionary psychologists and their critics. Paying particularly close attention to the popular science writings of Steven Pinker, Edward O. Wilson, Richard Dawkins, and Stephen Jay Gould, Gander traces the history of the controversy, succinctly summarizes the claims and theories of the evolutionary psychologists, dissects the various arguments deployed by each side, and considers in detail the far-reaching ramifications—social, cultural, and political—of this debate. Gander's lucid and highly readable account concludes that evolutionary psychology now holds the potential to answer our oldest and most profound moral and philosophical questions, fundamentally changing our self-perception as a species.

geoffrey miller the mating mind: Practical Female Psychology for the Practical Man Joseph

W. South, 2008-05-24 Practical Female Psychology for the Practical Man is a unique examination of women and relationships in an era of material equality between the sexes. Despite vast gains in the welfare of women, especially in the modern West, both men and women are finding relationships ranging from dating to marriage increasingly difficult. The author draws upon cutting edge science in evolutionary biology, and neuropsychology, and vast personal experience with women to distill some simple and practical principles men will find useful for creating and maintaining relationships with emotionally and sexually compatible women.

geoffrey miller the mating mind: Gender, Sexuality and Reproduction in Evolutionary Narratives Venla Oikkonen, 2013-07-18 Since the early 1990s, evolutionary psychology has produced widely popular visions of modern men and women as driven by their prehistoric genes. In *Gender, Sexuality and Reproduction in Evolutionary Narratives*, Venla Oikkonen explores the rhetorical appeal of evolutionary psychology by viewing it as part of the Darwinian narrative tradition. Refusing to start from the position of dismissing evolutionary psychology as reactionary or scientifically invalid, the book examines evolutionary psychologists' investments in such contested concepts as teleology and variation. The book traces the emergence of evolutionary psychological narratives of gender, sexuality and reproduction, encompassing: Charles Darwin's understanding of transformation and sexual difference Edward O. Wilson's evolutionary mythology and the evolution-creationism controversy Richard Dawkins' molecular agency and new imaging technologies the connections between adultery, infertility and homosexuality in adaptationist thought. Through popular, literary and scientific texts, the book identifies both the imaginative potential and the structural weaknesses in evolutionary narratives, opening them up for feminist and queer revision. This book will be of interest to students and scholars of the humanities and social sciences, particularly in gender studies, cultural studies, literature, sexualities, and science and technology studies.

geoffrey miller the mating mind: *The Nature of Being Human* Harold Fromm, 2009-05-04 Essays exploring humanity's connection with the environment. Although the physical relationship between the natural world and individuals is quantifiable, the psychosocial effect of the former on the latter is often less tangible. What, for instance, is the connection between the environment in which we live and our creativity? How is our consciousness bounded and delimited by our materiality? And from whence does our idea of self and our belief in free will derive and when do our surroundings challenge these basic assumptions? Eco-critic Harold Fromm's challenging exploration of these and related questions twines his own physical experiences and observations with insights gathered from both the humanities and the sciences. Writing broadly and personally, Fromm explores our views of nature and how we write about it. He ties together ecology, evolutionary psychology, and consciousness studies to show that our perceived separation from our surroundings is an illusory construct. He argues for a naturalistic vision of creativity, free will, and the literary arts unimpeded by common academic and professional restraints. At each point of this intellectual journey, Fromm is honest, engaging, and unsparing. Philosophical, critical, often personal, Fromm's sweeping, interdisciplinary, and sometimes combative essays will change the way you think about your place in the environment. "How rare it is that a work of philosophical inquiry is written with the passion of a *cri de coeur*, but Harold Fromm's brilliantly conceived *The Nature of Being Human* resonates with such uncanny depths. Here is an utterly engrossing first-person account of a harrowing pilgrimage into the 21st century and its disturbing revelations about humankind's truest nature, in contrast to the comforting solitudes of a "humanist" past. If the role of the philosopher is to force us to think, Harold Fromm is a born philosopher." —Joyce Carol Oates "Fromm, an erudite, prolific author of numerous works ranging from ecocritical commentary to self-reflective discourses, presents a compilation of essays that illuminate his views regarding why most Americans seem oblivious to the destruction of their environment." —Choice "Fromm's journey from victim, to campaigner, to pioneer of eco-criticism (that is, the study of literature from an ecological viewpoint) is documented here, alongside challenging analyses of man's place in nature, free will, our relationship with technology and more. Scholarly but engaging, Fromm is an environmentalist, but also a realist." —Organic Gardener

geoffrey miller the mating mind: *The Origin of Language* Madeleine Beekman, 2025-08-05 In a radical new story about the birth of our species, *The Origin of Language* argues that it was not hunting, fighting, or tool-making that forced early humans to speak, but the inescapable need to care for our children. Journeying to the dawn of *Homo sapiens*, evolutionary biologist Madeleine Beekman reveals the "happy accidents" hidden in our molecular biology—DNA, chromosomes, and proteins—that led to one of the most fateful events in the history of life on Earth: our giving birth to babies earlier in their development than our hominid cousins the Neanderthals and Denisovans. Faced with highly dependent infants requiring years of nurturing and protection, early human communities needed to cooperate and coordinate, and it was this unprecedented need for

communication that triggered the creation of human language—and changed everything. Infused with cutting-edge science, sharp humor, and insights into the history of biology and its luminaries, Beekman weaves a narrative that's both enlightening and entertaining. Challenging the traditional theories of male luminaries like Chomsky, Pinker, and Harari, she invites us into the intricate world of molecular biology and its ancient secrets. *The Origin of Language* is a tour de force by a brilliant biologist on how a culture of cooperation and care have shaped our existence.

geoffrey miller the mating mind: Architecture and Embodiment Harry Francis Mallgrave, 2013-06-26 In recent years we have seen a number of dramatic discoveries within the biological and related sciences. Traditional arguments such as nature versus nurture are rapidly disappearing because of the realization that just as we are affecting our environments, so too do these altered environments restructure our cognitive abilities and outlooks. If the biological and technological breakthroughs are promising benefits such as extended life expectancies, these same discoveries also have the potential to improve in significant ways the quality of our built environments. This poses a compelling challenge to conventional architectural theory... This is the first book to consider these new scientific and humanistic models in architectural terms. Constructed as a series of five essays around the themes of beauty, culture, emotion, the experience of architecture, and artistic play, this book draws upon a broad range of discussions taking place in philosophy, psychology, biology, neuroscience, and anthropology, and in doing so questions what implications these discussions hold for architectural design. Drawing upon a wealth of research, Mallgrave argues that we should turn our focus away from the objectification of architecture (treating design as the creation of objects) and redirect it back to those for whom we design: the people inhabiting our built environments.

geoffrey miller the mating mind: The Elephant in the Brain Kevin Simler, Robin Hanson, 2018 Human beings are primates, and primates are political animals. Our brains, therefore, are designed not just to hunt and gather, but also to help us get ahead socially, often via deception and self-deception. But while we may be self-interested schemers, we benefit by pretending otherwise. The less we know about our own ugly motives, the better - and thus we don't like to talk or even think about the extent of our selfishness. This is the elephant in the brain. Such an introspective taboo makes it hard for us to think clearly about our nature and the explanations for our behavior. The aim of this book, then, is to confront our hidden motives directly - to track down the darker, unexamined corners of our psyches and blast them with floodlights. Then, once everything is clearly visible, we can work to better understand ourselves: Why do we laugh? Why are artists sexy? Why do we brag about travel? Why do we prefer to speak rather than listen? Our unconscious motives drive more than just our private behavior; they also infect our venerated social institutions such as Art, School, Charity, Medicine, Politics, and Religion. In fact, these institutions are in many ways designed to accommodate our hidden motives, to serve covert agendas alongside their official ones. The existence of big hidden motives can upend the usual political debates, leading one to question the legitimacy of these social institutions, and of standard policies designed to favor or discourage them. You won't see yourself - or the world - the same after confronting the elephant in the brain.

Indeed, the great fear is we're entering endgame where we appear to have lost the race between self-destruction and self-discovery—the race to find the psychologically relieving understanding of our 'good and evil'-afflicted human condition. Well, astonishing as it is, this book by biologist Jeremy Griffith presents the 11th hour breakthrough biological explanation of the human condition necessary for the psychological rehabilitation and transformation of our species! The culmination of 40 years of studying and writing about our species' psychosis, FREEDOM delivers nothing less than the holy grail of insight we have needed to free ourselves from the human condition. It is, in short, as Professor Harry Prosen, a former president of the Canadian Psychiatric Association, asserts in his Introduction, 'The book that saves the world'. Griffith has been able to venture right to the bottom of the dark depths of what it is to be human and return with the fully accountable, true explanation of our seemingly imperfect lives. At long last we have the redeeming and thus transforming understanding of human behaviour! And with that explanation found all the other great outstanding scientific mysteries about our existence are now also able to be truthfully explained—of the meaning of our existence, of the origin of our unconditionally selfless moral instincts, and of why we humans became conscious when other animals haven't. Yes, the full story of life on Earth can finally be told—and all of these incredible breakthroughs and insights are presented here in this 'greatest of all books'.

geoffrey miller the mating mind: The Battle for Compassion Jonathan Leighton, 2011 Six hundred years after Copernicus presented his revolutionary and heretical heliocentric theory, a sunset can still look unexpectedly new. What if the fate of our world depended on a similar shift in perspective? Synthesizing recent thinking from science, philosophy, psychology and economics with the author's own reflections on freedom, identity and morality, *The Battle for Compassion* offers a fresh, sweeping perspective on the human condition and a deep contemplation of the basis for our priorities at this critical moment in our history. The threats to our existence and the persistence of intense suffering are closely intertwined issues with similar underlying causes. Addressing them honestly requires us to reflect detachedly on who we are, probe the boundaries of ethical thinking, and ask some really big questions. What matters? What are the basic forces driving our species' trajectory, and where are they leading us? And what would it realistically take for us to preserve a future worth living in? These questions recur as we go through life and experience bliss and pain, the passing of time, the kindness and cruelty of our fellow humans, the monotony of routine and the shock of unanticipated change. This book ponders these pivotal questions and attempts to offer some answers.
